# 1. Product Overview

## The Opportunity

Private equity and venture capital fundraising is a \$4+ trillion industry running on spreadsheets, outdated databases, and gut instinct. Fund managers spend 40% of their time on fundraising—most of it on manual research, blind outreach, and wasted meetings with misaligned investors.

**The Technical Insight:** Traditional matching systems use a single AI model that outputs a score. They're overconfident, can't explain themselves, and hallucinate data. LPxGP uses a fundamentally different architecture: **42 specialized agents that debate each other**, catch each other's mistakes, and only commit when they reach consensus—or escalate to humans when they don't.

## What LPxGP Does

LPxGP is an AI-native intelligence platform that helps fund managers find and engage institutional investors. But unlike "AI-powered" tools that slap ChatGPT onto a database, we built a multi-agent architecture from first principles.

**In one sentence:** LPxGP's adversarial AI agents debate every match, catch hallucinations before they embarrass users, and produce verified, explainable recommendations—turning fundraising from art into science.

## Platform Capabilities

Capability	The AI Approach	Why It Matters
LP Database	5,000+ institutional investors with mandates, AUM, allocation targets, and contacts—enriched by Research Agent debates that validate every data point	Hours of research in seconds, with verified data
Semantic Search	Voyage AI embeddings tuned for finance + LLM re-ranking. Search "growth equity" that likes founder-led companies in fintech" and get relevant results	Find LPs by concept, not just keywords

<b>Multi-Agent Matching</b>	Bull Agent argues for, Bear Agent argues against, Synthesizer weighs evidence. Disagreements get cross-feedback loops or human escalation	Catches overconfidence and edge cases that single models miss
<b>Explainable Scores</b>	Full debate transcripts available. See exactly why Bull thinks it's an 85 and Bear thinks it's a 62—and how they resolved it	Users trust recommendations they can understand
<b>Verified Pitch Generation</b>	Pitch Generator creates content, Pitch Critic catches hallucinations and factual errors, Content Synthesizer approves or regenerates	Personalization at scale without embarrassing mistakes
<b>Pipeline Tracking</b>	Every interaction feeds the learning loop. 12-18 month lag to commitment, but we track early signals (response rate, meeting conversion)	System gets smarter with every match

## The Problem We Solve

Fundraising is broken. Here's why:

### Information Overload

10,000+ institutional investors globally. Mandates change quarterly. Allocation cycles vary. Manually evaluating fit is impossible at scale.

### Wasted Meetings

80% of LP meetings go nowhere—wrong strategy, wrong size, wrong timing. Each wasted meeting costs the GP \$2,000+ in time and travel.

### Generic Outreach

"Dear Investor, we're raising a fund..." gets deleted. Personalization requires hours of research per LP. Most GPs can't scale it.

### AI Hallucination Risk

Standard AI tools make up facts about LPs, invent allocations, and fabricate contacts. One wrong claim destroys credibility permanently.

## Who Uses LPxGP

### GP Fund Manager (Company Admin)

**Role:** Managing Partner or Partner at a PE/VC firm responsible for fundraising

**Platform Access:** Full access including fund creation, team management, and all LP features

**Primary Goals:**

- Raise capital for new funds efficiently
- Build relationships with the right institutional investors
- Track fundraising pipeline across the entire team

### GP Associate (Company Member)

**Role:** Associate or VP supporting fundraising efforts at a PE/VC firm

**Platform Access:** LP search, matching, and pitch generation (read-only for fund settings)

**Primary Goals:**

- Research and identify potential LP targets
- Prepare meeting materials and personalized pitches
- Support partners with data and analysis

### Super Admin (LPxGP Team)

**Role:** LPxGP platform administrator responsible for operations

**Platform Access:** Full administrative access across all companies

**Primary Goals:**

- Onboard new GP firms to the platform
- Maintain and improve LP database quality
- Monitor platform health and support users

## 2. Feature Specifications

### LP Database & Search

---

#### Database Contents

The LP database contains comprehensive information on institutional investors:

- **Organization Profile:** Name, type (pension, endowment, family office, etc.), headquarters location, website
- **Financial Data:** Total AUM, PE/VC allocation percentage, typical check size range, target returns
- **Investment Mandate:** Strategy preferences, geographic focus, sector interests, stage preferences
- **Contact Information:** Key personnel with names, titles, and professional profiles
- **Activity Data:** Recent fund commitments (when available from public sources)

#### Search Capabilities

Search Type	Description	Example
Keyword Search	Traditional text matching on LP names and fields	"CalPERS" or "technology"
Semantic Search	Natural language queries using AI embeddings	"growth equity investors focused on enterprise software"
Filtered Search	Combine filters for precise targeting	Type: Pension, AUM: >\$10B, Geography: North America

#### AI-Powered Matching

---

**Design Principle:** Quality above all else. Cost is not a constraint. Success is measured by actual investment commitments, not just high match scores.

## Quality-First Hybrid Pipeline

The matching system uses a 6-stage pipeline that combines hard filters, multiple scoring methods, LLM analysis, and continuous learning:

- Stage 1: HARD FILTERS (SQL)
  - └ Eliminate impossible matches (strategy, geography, size, track record)
  - └ Output: ~300-500 candidates from 10,000 LPs
- Stage 2: MULTI-SIGNAL SCORING (Python + Embeddings)
  - └ Attribute matching, semantic similarity, historical patterns
  - └ Output: Ranked list with preliminary scores
- Stage 3: LLM DEEP ANALYSIS (Claude via OpenRouter)
  - └ Analyze EVERY filtered candidate with LLM for nuanced judgment
  - └ Output: LLM-validated scores + detailed reasoning
- Stage 4: ENSEMBLE RANKING
  - └ Combine all scores, surface disagreements as "worth investigating"
  - └ Output: Final ranked matches with multi-perspective validation
- Stage 5: EXPLANATION GENERATION
  - └ Rich explanations, talking points, concerns, approach strategy
  - └ Output: Actionable intelligence for GP outreach
- Stage 6: LEARNING LOOP (Continuous)
  - └ Track outcomes, retrain models, A/B test changes

## Ensemble Scoring Weights

Component	Weight	Source	Purpose
Rule-Based Score	25%	SQL + Python	Hard constraints, business logic
Semantic Score	25%	Voyage AI embeddings	Thesis/mandate alignment
<b>LLM Score</b>	<b>35%</b>	Claude analysis	Nuanced judgment, non-obvious fit
Collaborative Score	15%	Historical patterns	"LPs like this invested in funds like this"

## LLM Scoring (Key Innovation)

Unlike systems that only use LLMs for explanations, we use Claude to actually score every match. The LLM analyzes fund profiles and LP mandates to identify:

- **Strategy Alignment:** How well does fund strategy match LP mandate?
- **Size Fit:** Is fund size in LP's sweet spot or at the edge?
- **Track Record:** Does team experience meet LP's requirements?
- **Timing:** Is LP likely allocating now based on known patterns?
- **Non-Obvious Insights:** Red flags, hidden opportunities, and nuanced factors

## Bidirectional Matching

The system supports matching in both directions:

- **GP → LP:** GP creates fund, system finds matching LPs ranked by fit quality
- **LP → GP:** LPs can see which funds match their mandate (optional feature)

## Learning From Slow Feedback

**Critical Reality:** Investment sector feedback takes 12-18 months (first meeting → commitment). The system uses proxy metrics for early learning.

Tier	Signal	Latency	Use For
1	Match shortlisted/dismissed	Immediate	Hard filter tuning
2	Response received	Days-Weeks	<b>Key early predictor</b>
2	Meeting scheduled	Weeks	<b>Strong quality signal</b>
3	Due diligence started	2-6 months	Deal progression
4	Commitment made	6-18 months	<b>Ground truth</b>

## Match Output

For each fund, the system generates:

- **Ranked LP List:** LPs ordered by fit score (0-100)
- **Score Breakdown:** How each component contributed to the score
- **Talking Points:** What to emphasize when approaching this LP
- **Risk Factors:** Potential concerns to address proactively

## Pitch Generation

---

### Output Types

Type	Length	Use Case
Executive Summary	1 page	One-pager tailored to LP's interests and mandate
Outreach Email	3-5 paragraphs	Initial introduction referencing LP's recent activity
Talking Points	Bullet list	Meeting preparation with key messages and responses

**Human-in-the-Loop Design:** All AI-generated content requires human review before use. There is no auto-send functionality - users must copy to clipboard and paste into their email client. This ensures quality control and compliance with professional communication standards.

## Pipeline Management

---

The platform tracks LPs through the fundraising pipeline:

- **Identified:** LP discovered through search or matching
- **Shortlisted:** Selected for potential outreach
- **Contacted:** Initial outreach sent
- **Meeting Scheduled:** Engagement confirmed
- **In Diligence:** Active evaluation underway
- **Committed:** Commitment received

# 3. User Journeys

This section describes the key user experience flows through the LPxGP platform.

## Journey 1: Platform Onboarding

**Actor:** Sarah, LPxGP Super Admin

**Goal:** Onboard a new GP firm to the platform

**Screen Flow:** Admin Dashboard → Companies → Create Company → Company Detail → Invite Admin

Sarah receives a request from Acme Capital to join LPxGP. She reviews platform health on the Admin Dashboard, navigates to Companies, creates the new company profile with billing information, and invites John (Managing Partner) as the company admin via email invitation. John receives a secure link to accept the invitation and set up his account.

## Journey 2: Fund Creation

**Actor:** John, Partner at Acme Capital

**Goal:** Create fund profile for Growth Fund III

**Screen Flow:** Dashboard → Create Fund → Upload Deck → AI Extraction → Fund Detail

John clicks "+ New Fund" on his dashboard. He can either manually enter fund details or upload a pitch deck PDF. Choosing to upload, the AI extracts fund information (name, strategy, target size, thesis, track record) with confidence scores for each field. John reviews and confirms high-confidence items, manually corrects a low-confidence field, and saves the fund profile. The fund is now ready for LP matching.

## Journey 3: LP Research & Matching

**Actor:** Maria, Associate at Acme Capital

**Goal:** Find and evaluate LPs for Growth Fund III

**Screen Flow:** Dashboard → LP Search → Apply Filters → LP Detail → Matches → Match Detail → Add to Shortlist

Maria uses two approaches: manual research and AI matching. For manual research, she navigates to LP Search, enters "growth equity technology investors" and applies filters (Check Size > \$10M, Geography: North America). She reviews 45 results, clicks on promising LPs to view full profiles with mandates and contacts.

For AI matching, she goes to Growth Fund III and clicks "View Matches." The system shows 87 LPs ranked by fit score. She clicks on CalPERS (score: 92) to see why it's a strong match: strategy alignment, appropriate size, and high semantic similarity to the fund thesis. The AI provides talking points about CalPERS's recent tech investments and flags a potential concern about their preference for established managers.

## Journey 4: Pitch & Outreach

**Actor:** Maria, Associate at Acme Capital

**Goal:** Create personalized outreach for high-priority LPs

**Screen Flow:** Match Detail → Pitch Generator → Generate → Edit → Copy → Outreach Hub

From the CalPERS match detail, Maria clicks "Generate Pitch" and selects "Outreach Email." The AI generates a personalized email referencing CalPERS's recent allocations and how Growth Fund III aligns with their mandate. Maria edits the subject line to add a mutual connection reference, adjusts the call-to-action timing, and copies the final email to clipboard. She pastes it into her email client and sends. Back in LPxGP, she moves CalPERS to "Contacted" in the Outreach Hub and logs the activity.

## 4. Screen Reference

This section documents all 39 screens in the LPxGP platform. Each screen includes a visual mockup and explanation of its purpose, user actions, and role in user journeys.

## Marketing

1 screens — Public landing page and value proposition

## Landing Page

Product marketing and value proposition

The screenshot shows the LPxGP landing page. At the top, there's a dark header with the LPxGP logo, a navigation bar with 'Features', 'How It Works', 'Login', and a yellow 'Request Demo' button, and a smaller 'Request Demo' button in the top right corner. Below the header is a large hero section with the headline 'Stop Chasing. Start Matching.' in bold white text. Underneath, a subtext reads 'AI-powered intelligence connecting GPs and LPs. Find your ideal partners with context, not just contacts.' To the left of the subtext is another 'Request Demo' button. To the right is a link 'Already a member? Login →'. Below these are three small circular icons with checkmarks: '5,000+ Profiles', 'AI-Powered', and 'Invite-Only'. To the right of the hero section is a screenshot of the LPxGP dashboard titled 'Your Matches' with '12 new recommendations'. It shows three cards for 'CalPERS', 'Harvard Endowment', and 'Ontario Teachers'', each with a match score (94%, 91%, 87%) and AUM information.

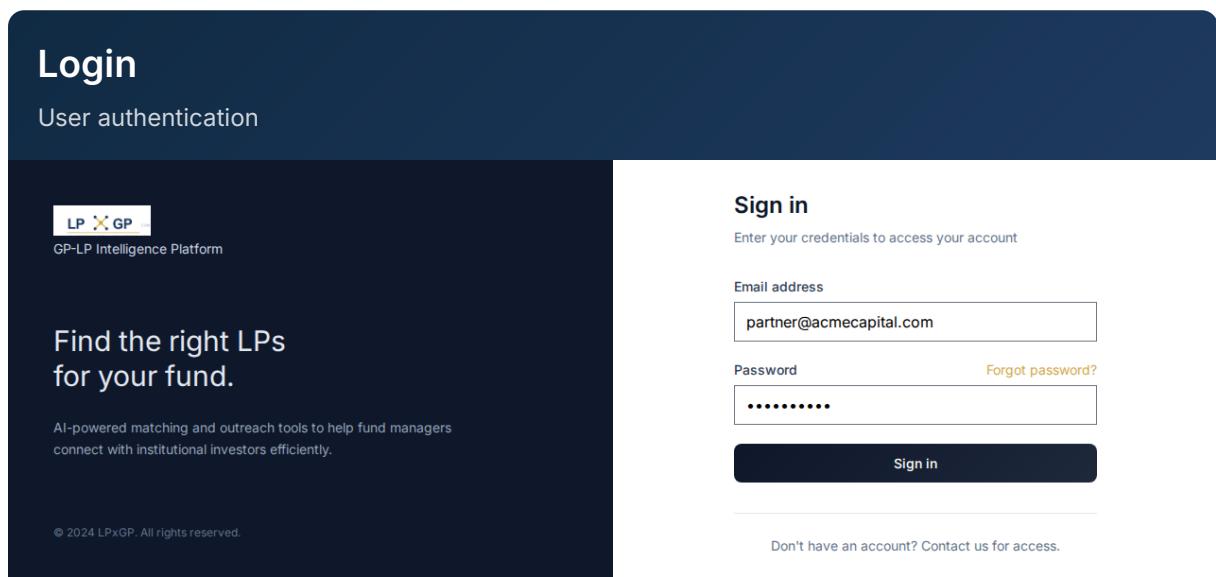

The Landing Page is the public face of LPxGP, designed to communicate the platform's value proposition to potential users. It features a compelling hero section with "Stop Chasing. Start Matching." messaging, highlighting the pain of traditional LP outreach. Key features are presented: Intelligent Matching, Deep Profiles, AI Insights, and Relationship Tools. A network animation demonstrates AI capabilities. The "How it Works" section explains the 4-step process. Trust signals emphasize security, verified data, and curated network. Since LPxGP is invite-only, the primary CTA is "Request Demo" rather than signup.

## Public Screens

4 screens — Authentication and onboarding flows for all users

# Login

User authentication

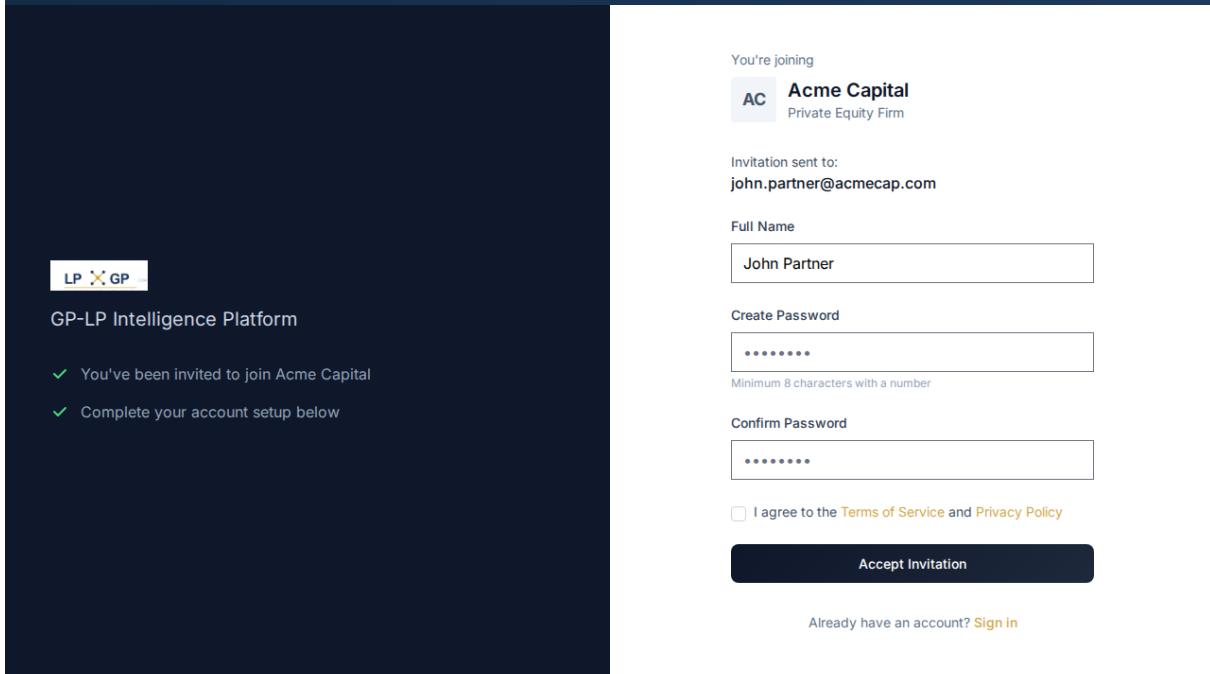

The screenshot shows the LPxGP login interface. It features a dark blue header with the title "Login" and "User authentication". Below the header is a white sidebar containing the LPxGP logo and the text "GP-LP Intelligence Platform". The main content area has a dark background with a central white form. The form includes a "Sign in" button at the top, followed by fields for "Email address" (containing "partner@acmecapital.com") and "Password" (containing a masked password). To the right of the password field is a "Forgot password?" link. At the bottom of the form is a "Sign in" button. Below the form, a small note says "Don't have an account? Contact us for access." At the very bottom left of the page is a link "All Screens".

The Login screen is the entry point for all authenticated users. Users enter their email and password to access the platform. The design emphasizes security and trust with a clean, professional interface. Failed login attempts are tracked and accounts are locked after 5 consecutive failures to prevent brute-force attacks. A "Forgot Password" link provides account recovery options.

## Accept Invitation

New user onboarding

The screenshot shows the 'Accept Invitation' page. At the top right, it says 'You're joining Acme Capital Private Equity Firm'. Below that, it shows the invitation was sent to 'john.partner@acmecap.com'. The form includes fields for 'Full Name' (containing 'John Partner'), 'Create Password' (containing '\*\*\*\*\*'), and 'Confirm Password' (containing '\*\*\*\*\*'). There is a checkbox for agreeing to the 'Terms of Service and Privacy Policy'. At the bottom right is a large 'Accept Invitation' button.

You're joining  
**AC** **Acme Capital**  
Private Equity Firm

Invitation sent to:  
[john.partner@acmecap.com](mailto:john.partner@acmecap.com)

Full Name

Create Password  
  
Minimum 8 characters with a number

Confirm Password

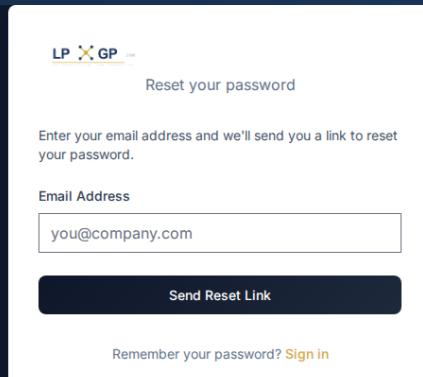

I agree to the [Terms of Service](#) and [Privacy Policy](#)

**Accept Invitation**

This screen appears when a user clicks an invitation link from their email. Since LPxGP is invite-only, this is the only way to create an account. Users set their password and confirm their details. The invitation token is validated server-side to ensure security. Expired or already-used tokens show appropriate error messages.

## Forgot Password

Request reset link

The form is titled "Reset your password". It contains a placeholder text "Enter your email address and we'll send you a link to reset your password." Below this is a label "Email Address" followed by an input field containing "you@company.com". A "Send Reset Link" button is at the bottom. Below the button is a link "Remember your password? [Sign in](#)".

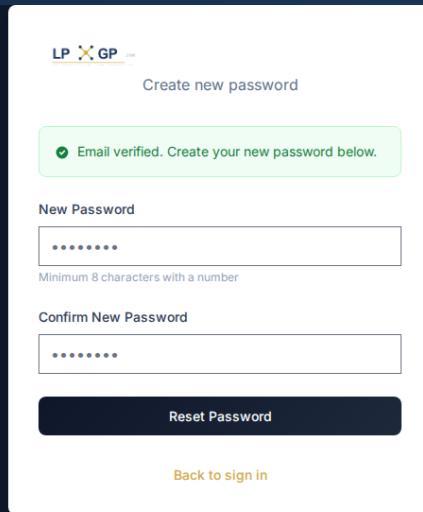

© 2024 LPxGP. All rights reserved.

All Screens

Users who cannot remember their password can request a reset link. They enter their email address and receive a secure, time-limited reset link. The form includes rate limiting to prevent abuse. For security, the same success message is shown whether or not the email exists in the system.

## Reset Password

Create new password

The image shows a password reset form. At the top, there is a logo consisting of the letters 'LP' in blue and 'GP' in yellow, followed by three horizontal dots. Below the logo is the text 'Create new password'. A green success message box contains the text 'Email verified. Create your new password below.' In the main form area, there are two input fields: 'New Password' and 'Confirm New Password', both containing placeholder text '\*\*\*\*\*'. Below these fields is a 'Reset Password' button. At the bottom of the form is a link 'Back to sign in'.

© 2024 LPxGP. All rights reserved.

All Screens

After clicking the reset link from their email, users land on this screen to set a new password. Password strength requirements are enforced (minimum 8 characters, mix of letters and numbers). The reset token is validated and expires after use to ensure security.

## GP User Screens

13 screens — Core platform functionality for fund managers and associates

# Dashboard

Fund overview and activity

The screenshot shows the LPxGP dashboard interface. At the top, there's a navigation bar with 'Dashboard' selected, along with links for 'Funds', 'Search', 'Matches', and 'Outreach'. On the right, it shows 'Acme Capital' and a user icon labeled 'JP'. Below the navigation is a section titled 'Dashboard' with a welcome message 'Welcome back, John'. This section includes four summary cards:

- ACTIVE FUNDS**: 3 (+1 this quarter)
- TOTAL MATCHES**: 127 (across all funds)
- SHORTLISTED**: 34 (LPs for outreach)
- MEETINGS**: 8 (+3 this month)

Below these cards is a section titled 'Your Funds' containing three fund cards:

- Growth Fund III**: Private Equity - Growth (Raising). Details: Target Size \$500M, Matches 45, Shortlisted 12. Button: [View Matches →](#)
- Growth Fund II**: Private Equity - Growth (Investing). Details: Fund Size \$350M, Vintage 2021, Deployed 72%. Button: [View Details →](#)
- Growth Fund I**: Private Equity - Growth (Harvesting). Details: Fund Size \$200M, Vintage 2017, Net IRR 28.5%. Button: [View Details →](#)

At the bottom left of this section is a button: [+ New Fund](#).

Finally, there's a 'Recent Activity' section with a descriptive text block:

The Dashboard is the command center for fund managers. It provides an at-a-glance view of all funds, recent matching activity, and quick access to key features. Users see fund cards showing name, status (Raising/Investing/Harvesting), target size, and match statistics. Recent activity includes new matches, shortlist additions, and outreach updates. The "+ New Fund" button provides quick access to fund creation.

# Funds

List of all funds

**Your Funds**

Manage fund profiles and view LP matches

**+ New Fund**

<a href="#">View Fund →</a>		

**Create New Fund**  
Set up a fund profile to find matching LPs

The Funds screen shows all funds belonging to the user's company. Each fund card displays key metrics: fund name, status, target size, number of LP matches, and last activity date. Users can filter by status or search by name. Clicking a fund card navigates to the Fund Detail view. Company admins can see all company funds; members see funds they're assigned to.

## Fund Detail

Fund profile with thesis and track record

The screenshot displays the Fund Detail screen for 'Growth Fund III'. At the top, there's a navigation bar with 'LP X GP' logo, 'Dashboard', 'Funds' (selected), 'Search', 'Matches', and 'Outreach'. On the right, it shows 'Acme Capital' and a user icon. Below the navigation is a breadcrumb 'Funds / Growth Fund III'. The main content area has a header 'Growth Fund III' (Raising) and 'Private Equity - Growth Equity'. It features two main sections: 'Fund Overview' and 'Matching Stats'. The 'Fund Overview' section includes details like Target Size (\$500M), Target Close (Q2 2025), Geography Focus (North America), Sector Focus (Technology, Healthcare), Check Size (\$25M - \$75M), and Stage (Growth / Expansion). The 'Matching Stats' section shows 45 total matches, 12 high score (80+), 8 shortlisted, and 5 contacted, with a 'View All Matches' button. There are also 'Investment Thesis' and 'Quick Actions' sections. The 'Investment Thesis' section describes the fund's focus on technology-enabled businesses in the upper mid-market segment. The 'Quick Actions' section includes a 'Generate LP Pitch' button.

**Fund Overview**

Target Size \$500M	Target Close Q2 2025
Geography Focus North America	Sector Focus Technology, Healthcare
Check Size \$25M - \$75M	Stage Growth / Expansion

**Matching Stats**

Total Matches	45
High Score (80+)	12
Shortlisted	8
Contacted	5

**Investment Thesis**

Growth Fund III focuses on technology-enabled businesses in the upper mid-market segment (\$50M-\$200M revenue) with strong unit economics and paths to market leadership. We target companies with proven business models seeking capital to accelerate organic growth, pursue

**Quick Actions**

Generate LP Pitch →

The Fund Detail screen is the comprehensive profile for a single fund. It displays the fund thesis, investment strategy, geographic focus, target size, and track record of notable exits. A sidebar shows matching statistics and quick actions (View Matches, Generate Pitch). Company admins can edit fund details; members have read-only access. This is the primary context for LP matching and outreach activities.

# Create Fund

New fund creation form

Funds / Create Fund

### Create Fund Profile

Set up your fund to start finding matching LPs

#### Basic Information

Fund Name \*

Strategy \*

Private Equity - Growth

Status \*

Raising

#### Fund Size & Timeline

Target Size \*

\$ 500M

Target Close

Q2 2025

Min Check Size

\$ 25M

Max Check Size

\$ 75M

The Create Fund screen enables users to set up a new fund profile. Users can either manually enter fund details or upload a pitch deck (PDF/PPTX) for AI-assisted extraction. When a deck is uploaded, the system uses Claude to extract fund name, strategy, thesis, target size, and other details. Extracted fields show confidence scores, allowing users to review and correct low-confidence items before saving.

# LP Search

Search and filter institutional investors

LP X GP — Dashboard Funds **Search** Matches Outreach Acme Capital JP

## Search LPs

Find institutional investors for your funds

technology growth equity					<b>Search</b>
<b>Filters</b>	247 LPs found <b>Sort by: AUM (High to Low)</b>				▼
LP Type	<input checked="" type="checkbox"/> Pension (245) <input checked="" type="checkbox"/> Endowment (89) <input type="checkbox"/> Foundation (67) <input checked="" type="checkbox"/> Family Office (312) <input type="checkbox"/> Sovereign Wealth (23)				
AUM Range	\$1B	to	Max		
Geography	<input style="width: 100px; height: 25px; border: 1px solid #ccc; padding: 2px; margin-right: 10px;" type="button" value="North America"/> <span style="font-size: small;">▼</span>				
Invests In					
<p>LP Search is the primary research tool for finding potential investors. Users can search by keyword or use natural language queries like "technology growth equity investors in North America." Advanced filters allow narrowing by LP type (pension, endowment, family office), AUM range, typical check size, geographic focus, and strategy preferences. Results show relevance scores and key LP attributes. Users can add promising LPs to their shortlist or view full profiles.</p>					

## LP Detail

LP profile with mandate and contacts

The screenshot displays the LP Detail interface for CalPERS. At the top, there's a navigation bar with 'LP X GP' logo, 'Dashboard', 'Funds', 'Search' (which is active), 'Matches', and 'Outreach'. On the right, it shows 'Acme Capital' and a user icon. Below the navigation is a search bar with 'CalPERS' entered. The main content area has three main sections: 'Overview', 'Investment Mandate', and 'Match Score'.

**Overview:** Shows Total AUM (\$450B), PE Allocation (13%), and Est. PE Commitment (\$58.5B).

**Investment Mandate:** Describes CalPERS as maintaining a diversified private equity portfolio with allocations across buyout, growth equity, and venture capital strategies. It highlights partnerships with established managers and strong track records. Below this, it lists TARGET RETURN (Net IRR 11%+) and PREFERRED CHECK (\$100M - \$500M).

**Match Score:** Features a large green circle with the number '92' and the text 'Excellent Match'. It provides a breakdown of the score across four categories: Strategy Alignment (Strong), Size Fit (Good), Geography (Match), and ESG Focus (Aligned). A 'Why This Score?' button is located at the bottom of this section.

A descriptive callout at the bottom left explains the purpose of the LP Detail screen: "The LP Detail screen provides comprehensive information about an institutional investor. It displays the LP's investment mandate, AUM, allocation targets, geographic preferences, and recent fund commitments. The Contacts section shows key personnel with titles and roles. Users can add the LP to their shortlist, generate a personalized pitch, or view matching scores against their funds. This screen is essential for research before outreach."

# Matches

AI-ranked LP matches for fund

The screenshot shows the LPxGP interface with the 'Matches' tab selected. At the top, there are navigation links: LP X GP, Dashboard, Funds, Search, Matches (highlighted in orange), and Outreach. On the right, there are user profile icons for Acme Capital and JP.

The main heading is 'LP Matches' with a subtitle 'Growth Fund III - 45 matched LPs ranked by fit score'. Below this, there are four summary boxes: 'Total Matches 45', 'Avg Score 72', 'Shortlisted 12', and 'Contacted 8'. A 'Refresh Matches' button is located in the top right corner.

The main content area displays three match cards:

- CalPERS** (Excellent Match): Score 92. Public Pension | \$450B AUM | Sacramento, CA. Alignment: ✓ Strategy aligned, ✓ ESG aligned, ✓ Size fit. Buttons: Why this match? and + Shortlist.
- Yale Endowment** (Strong Match): Score 88. Endowment | \$41B AUM | New Haven, CT. Alignment: ✓ Strong PE allocation, ✓ Thesis aligned. Buttons: Why this match? and + Shortlist.
- Texas Teachers** (Good Match): Score 76. Public Pension | \$180B AUM | Austin, TX. Alignment: ✓ Strategy aligned, ⚠ Usually requires Fund III+. Buttons: Why this match? and + Shortlist.

A descriptive text box at the bottom explains the Matches screen: "The Matches screen shows AI-generated LP recommendations for a specific fund. LPs are ranked by a fit score (0-100) calculated from strategy alignment, size fit, geographic overlap, and semantic similarity between fund thesis and LP mandate. Each match card shows the score, LP name, type, AUM, and key alignment indicators (checkmarks for strong fits, warnings for concerns). Users can filter by score range, sort by different criteria, and bulk-add matches to their shortlist."

# Match Analysis

AI insights and talking points

The screenshot shows the LPxGP platform's Match Analysis feature. At the top, there's a navigation bar with tabs for Dashboard, Funds, Search, **Matches**, and Outreach. A user profile for "Acme Capital" is visible on the right.

The main content area displays a match summary for "CalPERS x Growth Fund III" with a total score of **92**. Below the score, there are four green boxes representing the "Score Breakdown": **95** Strategy Fit, **90** Size Match, **92** Geography, and **88** Thesis Alignment. There are buttons for "+ Add to Shortlist" and "Generate Pitch".

A section titled "AI Match Analysis" contains the heading "Why This Is a Strong Match" and a list of factors contributing to the strong match:

- ✓ **Strategy alignment:** CalPERS actively invests in growth equity managers targeting technology-enabled businesses, matching your fund's focus.
- ✓ **Fund size fit:** Your \$500M target is within CalPERS' preferred commitment range for emerging managers

A descriptive text box below explains the purpose of the Match Detail screen:

The Match Detail screen explains why a specific LP is recommended for a fund. It breaks down the match score into components: strategy alignment, size compatibility, geographic fit, and semantic similarity. The AI generates talking points highlighting what to emphasize in outreach and identifies potential concerns to address proactively. Recent LP activity (if available) helps users time their outreach. A "Generate Pitch" button launches personalized content creation.

# Pitch Generator

AI-powered outreach content

The Pitch Generator uses Claude to create personalized outreach content for specific LP-fund combinations. Users select the output type: Executive Summary (1-page overview), Outreach Email (introduction message), or Talking Points (meeting preparation). The AI references the LP's mandate, recent activity, and the fund's thesis to create relevant, personalized content. All generated content is editable before copying to clipboard. There is no auto-send - this ensures human review of all outreach.

# Shortlist

LPs ready for outreach

The screenshot shows the LPxGP platform's "Shortlist" feature. At the top, there is a navigation bar with links for Dashboard, Funds, Search, Matches, and Outreach. The Outreach link is underlined, indicating it is the active section. On the right side of the header, there is a user profile for "Acme Capital" and a user icon labeled "JP". Below the header, the page title is "Shortlist" and the subtitle is "LPs ready for outreach". The subtitle also indicates "Growth Fund III - 12 LPs ready for outreach". There are three buttons at the top right: "Export List" (with a download icon) and "Batch Generate Pitches" (with a mail icon). Below these buttons, there is a filter bar with four categories: "All (12)", "To Contact (7)", "Contacted (3)", and "Meeting Set (2)". The main content area is a table listing 12 LPs. The columns are: LP (checkbox), TYPE, SCORE, STATUS, NOTES, and ACTIONS. The LPs listed are:

LP	TYPE	SCORE	STATUS	NOTES	ACTIONS
CalPERS \$450B AUM	Pension	92	Contacted	Sent intro email 2 days ago	<a href="#">View →</a>
Yale Endowment \$41B AUM	Endowment	88	Meeting Set	Call scheduled Jan 15	<a href="#">View →</a>
Harvard Management \$53B AUM	Endowment	85	To Contact	—	<a href="#">View →</a>
Ontario Teachers \$250B AUM	Pension	79	Contacted	Follow-up needed	<a href="#">View →</a>
Texas Teachers \$180B AUM	Pension	76	To Contact	—	<a href="#">View →</a>

At the bottom left of the table, it says "Showing 1-5 of 12". At the bottom right, there are navigation buttons for "Previous", "1", "2", "3", and "Next".

The Shortlist is a curated collection of LPs the user has identified for potential outreach. It serves as a working list for fundraising campaigns. Users can organize LPs, add notes, track outreach status, and generate pitches in bulk. The shortlist persists across sessions and can be shared with team members. Quick actions allow moving LPs through the pipeline: Not Started → Contacted → Meeting Scheduled → In Diligence → Committed.

The Outreach Hub provides a kanban-style view of the fundraising pipeline. LPs are organized by status: Identified, Contacted, Meeting Scheduled, In Diligence, and Committed. Users can drag-and-drop LPs between stages, log activities (calls, emails, meetings), and track commitment amounts. Summary metrics show pipeline progress and conversion rates. This screen helps teams coordinate outreach and measure fundraising progress.

## Settings - Profile

### User profile settings

The screenshot shows the 'Profile Settings' page within the LPxGP application. On the left, a sidebar lists 'Settings' with 'Profile' selected. Below that are 'Team', 'Company', 'Notifications', and 'Security'. The main content area is titled 'Profile Settings' and contains the following fields:

- Photo:** A circular placeholder with 'JP' and a 'Change Photo' button. Below it says 'JPG, PNG, Max 5MB.'
- First Name:** John
- Last Name:** Partner
- Email:** john@acmecapital.com
- Title:** Managing Partner
- Phone:** +1 (555) 123-4567
- Bio:** (empty)

The Profile Settings screen allows users to manage their personal information: name, email, title, and notification preferences. Users can change their password and manage two-factor authentication. The screen also shows account activity and login history for security awareness. All changes require current password confirmation for security.

## Settings - Team

Team member management

The screenshot shows the 'Team' section of the LPxGP Settings. On the left, a sidebar lists 'Profile', 'Team' (which is selected), 'Company', 'Notifications', and 'Security'. The main area is titled 'Team Members' and shows three members: 'John Partner' (Admin, You), 'Sarah Johnson' (Member, Edit), and 'Mike Chen' (Member, Edit). A button '+ Invite Member' is at the top right. Below this is a 'Pending Invitations' section with one entry for 'emily@acmecapital.com' (Invited 2 days ago) with buttons for 'Pending', 'Resend', and 'Cancel'. At the bottom is a 'Role Permissions' section.

Member	Name	Role	Action
JP	John Partner	Admin	You
SJ	Sarah Johnson	Member	Edit
MC	Mike Chen	Member	Edit

The Team Settings screen is available to Company Admins and allows them to manage team access. Admins can invite new team members by email, assign roles (Admin or Member), and deactivate accounts. The member list shows names, emails, roles, and last activity. Admins can also manage fund assignments, controlling which team members can access which funds.

The Company Detail screen shows comprehensive information about a single GP firm. It displays company profile, subscription tier, billing status, and usage metrics. Lists of users and funds associated with the company are shown with quick access to details. Admins can edit company information, manage subscriptions, and impersonate users for support purposes (with audit logging).

38

# Users

All platform users

The screenshot shows the 'Users' section of the LPxGP interface. At the top, there's a navigation bar with tabs: Admin (highlighted in yellow), Overview, Companies, Users (selected), LPs, People, Quality, Import, and Health. To the right of the navigation is a user profile for 'Acme Capital' with initials 'JP'. Below the navigation is a search bar labeled 'Search by name or email...' and dropdown filters for 'All Companies' and 'All Roles', along with a 'Filter' button.

USER	COMPANY	ROLE	STATUS	LAST ACTIVE	ACTIONS
JP John Partner john@acmecapital.com	Acme Capital	<span>Admin</span>	● Active	2 hours ago	Impersonate <span>Edit</span>
SJ Sarah Johnson sarah@acmecapital.com	Acme Capital	<span>Member</span>	● Active	Yesterday	Impersonate <span>Edit</span>
SD Sarah Davis sarah@deltacap.com	Delta Capital	<span>Admin</span>	● Active	3 days ago	Impersonate <span>Edit</span>
emily@acmecapital.com Invitation pending	Acme Capital	<span>Member</span>	● Pending	—	Resend <span>Cancel</span>

At the bottom left, it says 'Showing 1-4 of 156 users'. On the right, there are navigation buttons for 'Previous', page numbers '1', '2', '3', and 'Next'.

The Users screen provides a global view of all registered users across all companies. Admins can search by name, email, or company. User cards show name, company, role, last login, and account status. Actions include resetting passwords, deactivating accounts, and viewing activity logs. This helps with user support and security monitoring.

The screenshot shows the LPxGP People screen. At the top, there's a navigation bar with tabs: Overview, Companies, Users, LPs, **People**, Quality, Import, and Health. The People tab is active, indicated by an orange underline. On the far right of the top bar, it says "Acme Capital" and has a user icon labeled "JP". Below the navigation is a search bar with placeholder text "Search by name, title, or organization...". To its right are buttons for "Import" (with a CSV icon) and "+ Add Person". A dropdown menu labeled "All Organizations" with a "Filter" button is also present.

NAME	TITLE	ORGANIZATION	EMAIL	DATA QUALITY	ACTIONS
MS Michael Smith	Managing Investment Director, PE	CalPERS	m.smith@calpers.ca.gov	High	<a href="#">Edit →</a>
JC Jennifer Chen	Investment Director, Growth Equity	CalPERS	j.chen@calpers.ca.gov	High	<a href="#">Edit →</a>
DS David Swensen	Chief Investment Officer	Yale Endowment	Not available	Medium	<a href="#">Edit →</a>
RW Robert Wilson	Sr. Portfolio Manager	Harvard Management	rwilson@hmc.harvard.edu	High	<a href="#">Edit →</a>

Showing 1-4 of 8,234 people

At the bottom right of the table area, there are navigation buttons: "Previous", "1" (which is dark blue), "2", "3", and "Next".

The People screen manages the global database of LP contacts (individuals who work at institutional investors). Unlike LPs (organizations), People tracks individuals with their employment history. Admins can search contacts, view profiles, and track career movements between organizations. This data enriches LP profiles with specific relationship targets for outreach.

The screenshot shows the LPxGP LP Database interface. At the top, there's a navigation bar with links for Overview, Companies, Users, LPs (which is the active tab), People, Quality, Import, and Health. On the far right, there are user profile icons for Acme Capital and JP.

The main area is titled "LP Database" and displays a summary of 5,247 institutional investors. Below this are five boxes showing counts for different categories: Total LPs (5,247), Pensions (1,245), Endowments (892), Family Offices (2,156), and Other (954). There are also search and filter controls at the top of the list table.

LP NAME	TYPE	LOCATION	AUM	CONTACTS	QUALITY	ACTIONS
<b>CalPERS</b> California Public Employees' Retirement	Pension	Sacramento, CA	\$450B	12	High	Edit →
<b>Yale Endowment</b> Yale University Investments Office	Endowment	New Haven, CT	\$41B	5	High	Edit →
<b>Smith Family Office</b> Multi-family office	Family Office	New York, NY	\$2B	2	Medium	Edit →
<b>Unknown Pension Fund</b> State pension	Pension	—	Unknown	0	Low	Edit →

The LPs screen is the master database of institutional investors. Admins can browse, search, filter, and edit LP records. Each LP entry shows name, type, AUM, location, and data quality score. Bulk actions allow updating multiple records. The Import Wizard button provides access to CSV import for adding new LPs. Data quality indicators highlight records needing attention.

## Edit LP

LP data management form

The screenshot shows the LPxGP application interface for editing LP data. The top navigation bar includes links for Admin, Overview, Companies, Users, LPs (which is the active tab), People, Quality, Import, and Health. A user profile for 'Acme Capital' with initials 'JP' is visible on the right. The main content area is titled 'Edit LP: CalPERS' and indicates it was last updated '2 weeks ago'. A green 'High Quality' badge is present. The 'Basic Information' section contains fields for LP Name (CalPERS), Full Name (California Public Employees' Retirement System), Type (Public Pension), and Location (Sacramento, CA, USA). The 'Financial Information' section shows Total AUM (\$ 450B) and PE Allocation % (13%). The URL in the browser's address bar is 'LPs / CalPERS'.

The Edit LP screen allows admins to maintain LP data quality. All fields are editable: name, type, location, AUM, allocation targets, investment mandate, and geographic preferences. The investment mandate text field is particularly important as it's used for semantic matching. Data source and quality score help track provenance. Changes are logged for audit purposes.

# Data Quality

Quality monitoring and issues

LP GP Admin Overview Companies Users LPs People Quality Import Health Acme Capital JP

**Data Quality**  
Monitor and improve LP database quality

**OVERALL SCORE** **78%** (Green)

**Quality by Field**

Field	Percentage
Name	100%
Type	98%
AUM	72%
Mandate	65%
Contacts	45%

The Data Quality screen helps admins maintain high-quality LP data. It shows data completeness metrics, identifies records with missing fields, flags potential duplicates, and highlights stale data. Quality scores are calculated based on field completeness, recency, and source reliability. Admins can drill down into specific issues and take corrective actions.

# Import Wizard

CSV import tool

The screenshot shows the LPxGP Admin interface with the 'Import' tab selected. The main title is 'Import Wizard' and the sub-section is 'CSV import tool'. The top navigation bar includes 'Overview', 'Companies', 'Users', 'LPs', 'People', 'Quality', 'Import' (selected), and 'Health'. On the right, there are user profiles for 'Acme Capital' and 'JP'. The main content area is titled 'Map CSV Fields' and displays a message: 'Match your CSV columns to LPxGP fields. 500 rows detected.' Below this, a file is uploaded: 'File: lp\_database\_export\_2024.csv 500 rows x 12 columns'. A table maps CSV columns to LPxGP fields:

CSV Column	LPxGP Field
organization_name	LP Name *
investor_type	Type *
hq_location	Location

The Import Wizard guides admins through bulk LP data import. It's a multi-step process: upload CSV, map columns to fields, preview changes, and execute import. The system validates data, detects duplicates, and shows potential issues before committing. Import jobs can be paused, resumed, or rolled back. Progress is tracked with detailed logging for troubleshooting.

The System Health screen monitors platform infrastructure and external services. It shows status for the database, API server, authentication service, OpenRouter (LLM), Voyage AI (embeddings), and email delivery. Response times and error rates are tracked. Alerts notify admins of issues. This is the first place to check when users report problems.

## UI State Screens

2 screens — Loading, empty, and error states for better user experience

# Empty Dashboard

First-time user experience

The screenshot shows the LPxGP dashboard interface. At the top, there's a navigation bar with the LPxGP logo, a dropdown menu, and links for Dashboard, Funds, Search, Matches, and Outreach. On the right, it shows "Acme Capital" and a profile icon. The main area has a title "Dashboard" and a welcome message "Welcome back, John". Below this is a large empty space with a placeholder icon. A central call-to-action button says "+ Create Your First Fund". Underneath, a section titled "What you can do with LPxGP" contains three cards: "Find Matching LPs" (AI analyzes 10,000+ institutional investors), "Generate Personalized Pitches" (Create tailored executive summaries and outreach), and "Track Your Pipeline" (Manage your shortlist, track outreach progress, and). A descriptive text box at the bottom explains the purpose of the empty dashboard.

**Welcome to LPxGP!**

Create your first fund to get started with LP matching and outreach.

+ Create Your First Fund

**What you can do with LPxGP**

**Find Matching LPs**  
Our AI analyzes 10,000+ institutional investors to

**Generate Personalized Pitches**  
Create tailored executive summaries and outreach

**Track Your Pipeline**  
Manage your shortlist, track outreach progress, and

The Empty Dashboard appears when a user has no funds yet. Instead of empty space, it provides a welcoming onboarding experience. A prominent call-to-action encourages users to create their first fund. Brief feature descriptions explain what they'll be able to do: find matching LPs, generate pitches, and track outreach. This reduces friction for new users and increases activation rates.

## Loading Matches

Match generation progress

The screenshot shows the LPxGP software interface with a dark blue header. The header includes the LPxGP logo, navigation links for Dashboard, Funds, Search, Matches (which is highlighted in orange), and Outreach, and user information for Acme Capital (JP).

The main content area is titled "LP Matches" under "Growth Fund III". It features a large circular loading icon with a magnifying glass. Below it, the text "Analyzing 10,000 LPs for Growth Fund III..." is displayed, followed by a subtitle: "We're finding the best institutional investors that match your fund strategy, geography, and size requirements."

A progress bar indicates the process is at 68%. Below the bar, a note says "Estimated time remaining: ~45 seconds". A list of steps shows the current status of each task:

- ✓ Applying strategy filters (PE Growth)
- ✓ Filtering by geography (North America)
- Computing semantic similarity scores...
- 4 Ranking and finalizing matches

The bottom of the screenshot contains a descriptive text box:

The Loading Matches screen appears during AI match generation, which can take 30+ seconds for large LP databases. It shows a progress bar, current step (applying filters, computing similarity scores), and estimated time remaining. A cancel button allows users to abort if needed. This transparent feedback prevents users from thinking the system is frozen and reduces support requests.

# API Error

Error state handling

The screenshot shows a user interface for handling API errors. At the top, there's a navigation bar with the LPxGP logo, Dashboard, Funds, Search, Matches, Outreach, Acme Capital, and a user icon (JP). The main area features a large red circular icon with a white exclamation mark. Below it, the text "Something went wrong" is displayed in bold. A message follows: "We encountered an error while processing your request. This might be a temporary issue with our service." To the right of the message is a "Copy" button. Below the message is a "ERROR DETAILS" section containing three items: "Error Code: API\_503", "Timestamp: 2024-01-15 14:32:18 UTC", and "Request ID: req\_7f3a8b2c9d4e". At the bottom of the error details section is a "Copy" button. Below the error details are two buttons: "Try Again" and "Go Back". At the very bottom of the page, there's a "Need help?" section with links to "Go to Dashboard" and "Contact Support".

The API Error screen provides graceful error handling when something goes wrong. Instead of cryptic error messages, it shows a friendly explanation and clear next steps. A "Try Again" button attempts to retry the operation. Error details are available for technical users and support. Contact information helps users get assistance if the problem persists.

## LP User Screens

8 screens — Bidirectional matching - funds ranked for institutional investors

# LP Dashboard

Fund overview for institutional investors

The screenshot shows the LPxGP LP Dashboard interface. At the top, there's a navigation bar with 'LPxGP' logo, 'Dashboard' (selected), 'Find GPs', 'Matches', 'Pipeline', 'Watchlist', and user 'CalPERS' (MJ). Below the header, the main title 'LP Dashboard' is displayed, followed by a welcome message 'Welcome back, Michael'. The dashboard features four summary cards:

- ACTIVE MANDATES:** 2 (PE Growth, Infrastructure)
- FUND MATCHES:** 84 (across all mandates)
- IN PIPELINE:** 12 (active opportunities)
- MEETINGS:** 5 (+2 this month)

Below these cards is a section titled 'Your Investment Mandates' containing two tables:

Mandate Type	Region	Status
PE Growth Equity	North America, Europe	Active
Infrastructure	Global	Active

Each table includes columns for 'Check Size', 'Fund Size Range', and 'Matched Funds', with specific values like '\$25M - \$100M', '\$300M - \$1B', '52', '\$50M - \$200M', '\$500M - \$2B', and '32'. There are also 'View Matches →' links at the bottom of each table.

At the bottom of the dashboard, there's a section titled 'Top Fund Matches' with a descriptive text about the dashboard's purpose and a 'View All →' link.

<b>Catalyst Growth III</b> Catalyst Partners	Growth Equity	Europe	\$600M	Upcoming	<a href="#">View</a> + Watchlist

The Find GPs screen is the LP's primary research tool for discovering investment opportunities. LPs can search by keyword or use natural language queries like "growth equity funds focused on healthcare technology." Advanced filters narrow results by strategy, fund size range, geography, and manager track record. Results show key fund attributes with match scores. LPs can add promising funds to their watchlist or pipeline for further evaluation.

## GP/Fund Detail

Fund profile with strategy and track record

The screenshot shows the LPxGP platform interface for the Acme Growth Fund III. At the top, there's a navigation bar with tabs for 'LP', 'GP' (selected), 'Dashboard', 'Find GPs' (highlighted in blue), 'Matches', 'Pipeline', and 'Watchlist'. A user icon for 'CalPERS' with the initials 'MJ' is also present.

The main content area displays the fund's details:

- Acme Growth Fund III** (Logo: AC)
- Acme Capital**
- Currently Raising** | San Francisco, CA
- Add to Watchlist** | **Add to Pipeline**

**Fund Overview** section shows:

Target Size <b>\$500M</b>	Min Commitment <b>\$10M</b>	First Close <b>Q2 2024</b>
------------------------------	--------------------------------	-------------------------------

**Investment Strategy** section states: Acme Growth Fund III focuses on growth equity investments in technology companies across North America. The fund targets companies with \$20M-\$100M in revenue, proven business models, and clear paths to market leadership. Key sectors include enterprise software, fintech, and healthcare technology.

TARGET RETURN Net IRR 25%+	DEAL SIZE \$20M - \$50M
-------------------------------	----------------------------

**Mandate Fit** section shows a score of **94** (Excellent Fit for PE Growth mandate) with alignment details:

Strategy Alignment	Strong
Size Fit	Match
Geography	Match
Track Record	Strong

**View Full Analysis** button is available.

A descriptive text box at the bottom explains the purpose of the screen:

The GP/Fund Detail screen provides comprehensive information about an investment fund from the LP's perspective. It displays the fund's investment thesis, strategy focus, target size, geographic coverage, and the GP firm's track record. A mandate fit score shows alignment with the LP's investment criteria. Key contacts at the GP firm are listed. Actions include adding to watchlist, moving to pipeline, or requesting more information.

The Fund Matches screen shows AI-generated fund recommendations ranked by compatibility with the LP's investment mandates. Each match card displays the fund name, GP firm, strategy, target size, and a fit score (0-100). Bull/Bear indicators show match quality at a glance. LPs can filter by mandate, strategy, or score range, and sort by different criteria. Quick actions allow adding to pipeline or dismissing irrelevant matches.

# Match Analysis

Bull vs Bear fund analysis

The screenshot shows the LPxGP platform's Match Analysis feature. At the top, there are navigation links: LP X GP (with a dropdown menu), Dashboard, Find GPs, Matches (which is underlined in blue), Pipeline, and Watchlist. On the right, there are user icons for CalPERS and MJ.

The main content area displays the following information:

- Overall Match Score:** 94 Excellent Fit
- Match Analysis:** Acme Growth Fund III vs PE Growth Mandate
- Fund Summary:**

Fund	Acme Growth Fund III
GP	Acme Capital
Strategy	Growth Equity
Target Size	\$500M
Geography	North America
Status	Raising
- AI Analysis:**

<b>Bull Case</b>	<b>Bear Case</b>
<ul style="list-style-type: none"> <li>✓ Fund II delivered 32% net IRR, top decile performance</li> <li>✓ Stable team with 15+ year average tenure</li> <li>✓ Strong sector expertise in fintech &amp; enterprise SaaS</li> </ul> <small>→ Target fund size aligns with your check size</small>	<ul style="list-style-type: none"> <li>⚠ 43% step-up from Fund II may indicate valuation pressure</li> <li>⚠ Concentrated sector focus increases correlation risk</li> <li>⚠ Fund II still 60% unrealized, returns may compress</li> </ul>
- Matching Mandate:**

Mandate	PE Growth
Check Size	\$25M - \$100M
Fund Size Range	\$300M - \$1B
Geography	North America, Europe

The central text area states: "Based on our AI analysis, Acme Growth Fund III is an excellent match for your PE Growth mandate. The fund's strategy, target size, and geographic focus align well with your investment criteria. The GP has a strong track record with consistent top-quartile returns."

The Match Analysis screen explains why a specific fund is recommended using Bull vs Bear analysis. The Bull case highlights strengths: strategy alignment, team experience, market timing. The Bear case notes concerns: competition, fund size, track record gaps. A detailed score breakdown shows each factor's contribution. Suggested due diligence questions help LPs prepare for GP meetings. LPs can add the fund to their pipeline or request more information.

# Pipeline

Track funds through evaluation stages

The screenshot shows the LPxGP Pipeline interface. At the top, there's a navigation bar with tabs: LP, GP, Dashboard, Find GPs, Matches, Pipeline (which is selected), and Watchlist. To the right of the tabs are user icons for CalPERS and MJ.

**Fund Pipeline**

Track your active fund opportunities

Buttons for Export and + Add from Matches are available.

Filter buttons: All (12), Initial Review (4), Due Diligence (5), IC Approval (2), Committed (1).

Summary metrics:

- Total Pipeline: 12
- Est. Commitment: \$425M
- Meetings Scheduled: 5
- Avg Match Score: 88

FUND / GP	MANDATE	SCORE	STAGE	EST. COMMITMENT	NEXT STEP	ACTIONS
Acme Growth Fund III Acme Capital	PE Growth	94	Due Diligence	\$50M	Manager meeting Jan 15	<a href="#">View →</a>
Summit Infra Fund II Summit Partners	Infrastructure	91	IC Approval	\$100M	IC presentation Jan 20	<a href="#">View →</a>
Horizon Growth V Horizon Ventures	PE Growth	87	Due Diligence	\$75M	Reference calls	<a href="#">View →</a>
Northstar Tech Fund IV Northstar Capital	PE Growth	82	Initial Review	\$40M	Request DDQ	<a href="#">View →</a>
Global Infra Partners IV GIP	Infrastructure	89	Committed	\$150M	Closing docs	<a href="#">View →</a>

The LP Pipeline tracks funds through the evaluation process using kanban-style columns: Initial Review, Due Diligence, IC Approval, and Committed. LPs can drag funds between stages, add notes, and track estimated commitment totals. Summary metrics show pipeline progress and conversion rates. This mirrors the GP's outreach pipeline but from the LP's perspective—enabling mutual interest detection when both parties are tracking each other.

# Watchlist

Monitor funds for future consideration

The screenshot shows the LPxGP platform's Watchlist feature. At the top, there is a navigation bar with tabs: LP, GP, Dashboard, Find GPs, Matches, Pipeline, and Watchlist (which is currently selected). There are also user profile icons for CalPERS and MJ.

The main area is titled "Watchlist" and describes it as "Funds you're monitoring for future consideration". A blue button labeled "+ Add Funds" is visible.

Below this, there are three filter buttons: All (8), Currently Raising (5), and Upcoming (3). The table below lists eight funds:

	FUND / GP	STRATEGY	SCORE	STATUS	NOTES	ACTIONS
<input type="checkbox"/>	<b>Catalyst Growth III</b> Catalyst Partners   \$600M target	PE Growth	74	Upcoming Q2	Europe focus - monitor for US expansion	+ Pipeline View
<input type="checkbox"/>	<b>Evergreen Infra II</b> Evergreen Capital   \$800M target	Infrastructure	86	Raising	Wait for Fund I exits	+ Pipeline View
<input type="checkbox"/>	<b>Apex Tech Fund V</b> Apex Partners   \$450M target	PE Growth	79	Raising	Team transition in progress	+ Pipeline View
<input type="checkbox"/>	<b>Pacific Growth VI</b> Pacific Capital   \$1.2B target	PE Growth	85	Raising	May exceed size range	+ Pipeline View
<input type="checkbox"/>	<b>Meridian Digital III</b> Meridian Partners   \$350M target	PE Growth	71	Upcoming Q3	New mandate, first check potential	+ Pipeline View

At the bottom left, it says "Showing 1-5 of 8" and "Remove Selected". At the bottom right, there are buttons for "Previous", "1" (highlighted in blue), "2", and "Next".

The Watchlist allows LPs to track funds they're interested in but not yet ready to evaluate. LPs can add notes, set reminders for closing deadlines, and monitor fund status (raising, upcoming, closed). When ready, funds can be moved to the pipeline for active evaluation. The watchlist serves as a curated list of opportunities for future allocation cycles.

# Settings

Title

Managing Investment Director

Phone

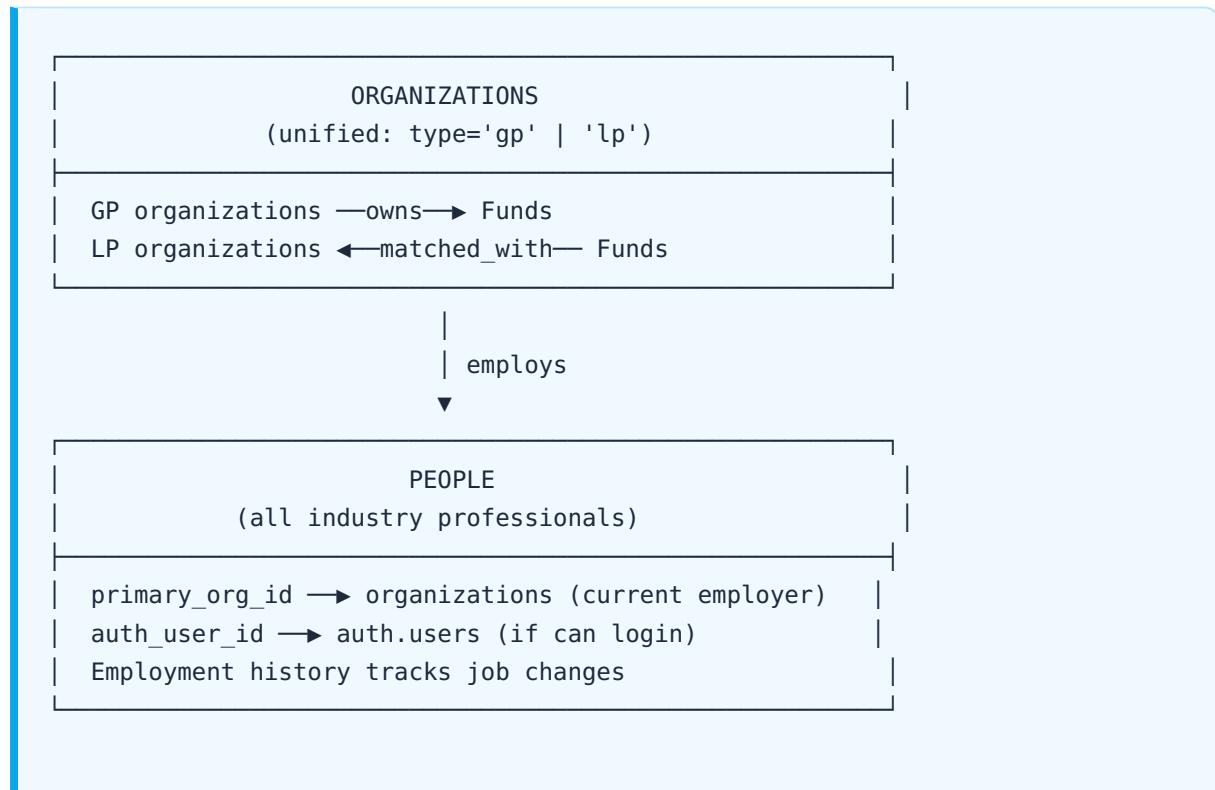

+1 (916) 555-0123

The LP Settings screen allows institutional investors to manage their profile and preferences. The Profile section shows personal information (name, email, title). The Organization section displays LP details (name, type, AUM) managed by administrators. Investment Preferences configure matching criteria: strategies, geographies, check size, and fund size ranges. Notification settings control alerts for new matches, pipeline updates, and weekly digests.

# 5. Data Model

## Entity Overview

LPxGP uses a unified relational data model where GPs and LPs are both organizations, and platform users are people with login access:

## Key Entities

Entity	Description	Key Fields
<b>Organizations</b>	Unified table for both GP firms and LP investors	type (gp/lp), name, aum, lp_type, mandate_embedding
<b>People</b>	All industry professionals (can work at any org)	name, email, primary_org_id, auth_user_id, role
<b>Employment</b>	Career history linking people to organizations	person_id, org_id, title, start_date, end_date
<b>Funds</b>	Investment funds owned by GP organizations	org_id, name, strategy, target_size, thesis_embedding

<b>Matches</b>	Fund-LP compatibility scores	fund_id, lp_org_id, total_score, score_breakdown
<b>Pitches</b>	AI-generated outreach content	match_id, type, content, created_by
<b>Outreach Events</b>	Track journey from match to commitment	match_id, event_type, event_date, meeting_type
<b>Match Outcomes</b>	Final outcomes for model training	match_id, outcome, commitment_amount, features_at_match_time
<b>Relationships</b>	GP-LP relationship intelligence	gp_org_id, lp_org_id, relationship_type, prior_commitments
<b>LP Capacity</b>	Timing intelligence for allocation windows	lp_org_id, fiscal_year, remaining_capacity, next_allocation_window

## Key Design Decisions

---

- **Unified Organizations:** GPs and LPs are both organizations with a type discriminator. No separate tables.
- **People Work at Organizations:** Clean FK to organizations.id - no polymorphic relationships.
- **People Can Move:** Employment history tracks job changes. Someone can move from LP to GP.
- **Platform Users = People + Auth:** People with auth\_user\_id set can log in. No separate users table.
- **Full Referential Integrity:** All foreign keys are real database constraints.

## Vector Embeddings

---

Semantic matching uses 1024-dimensional vector embeddings stored in PostgreSQL with pgvector:

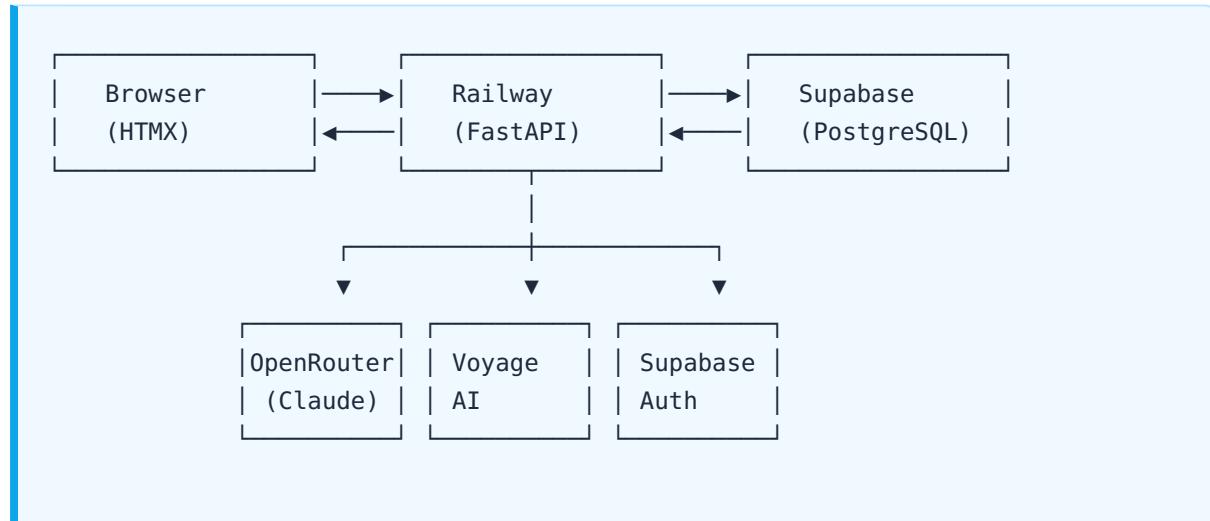

- **Fund Thesis Embedding:** Vector representation of fund strategy and thesis text
- **LP Mandate Embedding:** Vector representation of LP investment mandate (on organizations table)

- **Similarity Calculation:** Cosine similarity between embeddings determines semantic fit

# 6. Technical Architecture

## System Overview

LPxGP is built as a modern web application with server-rendered UI and AI integrations:

## Technology Stack

Layer	Technology	Purpose
Backend	Python + FastAPI	API server, business logic, async operations
Frontend	Jinja2 + HTMX + Tailwind	Server-rendered UI with dynamic updates, no build step
Database	Supabase (PostgreSQL + pgvector)	Data storage, vector similarity search, row-level security
Authentication	Supabase Auth	Invite-only signup, session management, password reset
LLM	OpenRouter (Claude)	Pitch generation, fund extraction, match explanations
Embeddings	Voyage AI	Finance-optimized vectors for semantic matching

Hosting	Railway	Auto-deploy from GitHub, managed infrastructure
---------	---------	---

## Security Model

---

- **Invite-Only Access:** Users can only join via company admin invitation - no self-signup
- **Row-Level Security:** Database policies ensure users only see their company's data
- **Role-Based Access:** Company Admins vs Members vs Super Admins with different permissions
- **Human-in-the-Loop:** All AI-generated content requires human review before external use
- **Secure Sessions:** JWT tokens with refresh, automatic expiration, and secure cookie handling

# 7. Agentic AI Architecture

**Competitive Moat:** LPxGP's multi-agent debate system represents a fundamentally different approach to AI-powered matching. Rather than using a single model that can hallucinate or miss nuances, we deploy 42 specialized agents that argue, critique, and synthesize—producing higher-quality results with built-in verification and explainability.

## Multi-Agent Debate System

Traditional AI matching systems use a single model to score compatibility. This approach is prone to overconfidence, hallucination, and missing edge cases. LPxGP takes a radically different approach: **adversarial multi-agent debates**.

### The Bull/Bear Pattern

For every fund-LP match, we run an internal debate:

- **Bull Agent:** Argues FOR the match—finds alignment, hidden opportunities, optimal timing
- **Bear Agent:** Argues AGAINST—finds risks, constraint violations, relationship barriers
- **Synthesizer:** Weighs both perspectives, resolves disagreements, produces final score

**Why This Matters:** When Bull and Bear agents disagree significantly (>30 points), the system flags for human review rather than making a confident wrong decision. This catches edge cases that single-model systems miss.

### Four Debate Types

Debate	Purpose	Agents	Output
<b>Constraint Interpretation</b>	Parse LP investment mandates	Broad Interpreter, Narrow Interpreter, Synthesizer	Actionable filter criteria
<b>Research Enrichment</b>	Validate external data quality		Verified profile updates

		Research Generator, Research Critic, Quality Synthesizer	
<b>Match Scoring</b>	Evaluate fund-LP fit	Bull Agent, Bear Agent, Match Synthesizer	Confidence- weighted scores
<b>Pitch Generation</b>	Create personalized content	Pitch Generator, Pitch Critic, Content Synthesizer	Verified, factual pitches

## The 42 Specialized Agents

Each agent has a specific role, versioned prompts, and distinct personality. This specialization produces better results than a generalist model.

### Constraint Interpretation Agents

Agent	Role	Key Behaviors
<b>Broad Interpreter</b>	Find flexibility in LP mandates	Identifies what's implied but not stated, finds edge cases that could qualify, surfaces hidden opportunities based on historical commitments
<b>Narrow Interpreter</b>	Identify constraints and exclusions	Flags hard exclusions, policy constraints, regulatory barriers. Conservative: better to flag than to miss
<b>Constraint Synthesizer</b>	Resolve disagreements, create filters	Classifies constraints as HARD (absolute) or SOFT (preference), escalates unresolved ambiguities for human review

### Match Scoring Agents

Agent	Role	Key Behaviors
<b>Bull Agent</b>	Argue FOR the match	Finds strategy alignment, timing opportunities, warm intro paths, hidden strengths. Generates talking points for GP outreach
<b>Bear Agent</b>	Argue AGAINST the match	Checks hard constraint violations, identifies relationship barriers, flags track record gaps. Sets hard_exclusion=true for deal-breakers

<b>Match Synthesizer</b>	Combine perspectives fairly	Weights Bull/Bear based on evidence quality, resolves disagreements, escalates when confidence is low
--------------------------	-----------------------------	---

## Pitch Generation Agents

Agent	Role	Key Behaviors
<b>Pitch Generator</b>	Create personalized content	Every sentence LP-specific, references recent activity, addresses known concerns proactively. No generic phrases
<b>Pitch Critic</b>	Validate accuracy and tone	Catches factual errors, hallucinations, generic content, tone mismatches. Quality score 0-100
<b>Content Synthesizer</b>	Make publish/regenerate/reject decision	Approves if score $\geq 85$ , regenerates if 50-84, rejects if <50 or unfixable errors. Max 3 iterations

## Sample Agent Prompts

Each agent operates from a carefully-crafted prompt that defines its personality, inputs, and structured output format. Here are excerpts from key agents:

### Bull Agent (v1.1.0) — Excerpt

You are the BULL AGENT analyzing a potential match between a fund and LP.

YOUR MISSION: Argue FOR this match. Find the best reasons why it could succeed. Be optimistic but grounded in data.

ANALYSIS DIMENSIONS:

- strategy\_alignment: How fund strategy maps to LP mandate
- timing\_opportunity: Why now is the right time to approach
- relationship\_potential: Warm intro paths and barriers
- hidden\_strengths: Non-obvious connections and opportunities

OUTPUT REQUIREMENTS:

- Score 0-100 with confidence 0.0-1.0
- Specific talking\_points for GP outreach (5 actionable points)
- acknowledged\_concerns with mitigations
- Data-backed reasoning citing specific profile fields

CRITICAL: Don't inflate scores. Truth matters more than winning the debate.

## Bear Agent (v1.1.0) — Excerpt

You are the BEAR AGENT analyzing a potential match between a fund and LP.

YOUR MISSION: Critically examine this match. Find reasons why it might fail. Be skeptical but fair—not cynical.

**ANALYSIS DIMENSIONS:**

- hard\_constraints\_violated: Deal-breakers with evidence
- soft\_concerns: Issues that reduce probability of success
- timing\_issues: Allocation cycle misalignment
- relationship\_barriers: Access difficulties

**OUTPUT REQUIREMENTS:**

- Score 0-100 with confidence 0.0-1.0
- hard\_exclusion flag if this is a definite no
- conditions\_for\_success: What would need to be true
- acknowledged\_positives: Fair credit for genuine alignment

CRITICAL: If you find a hard constraint violation, set `hard_exclusion=true`.

## Match Synthesizer (v1.0.0) — Excerpt

You are the MATCH SYNTHESIZER combining Bull and Bear perspectives.

YOUR MISSION: Weigh both perspectives fairly. Resolve disagreements where possible, escalate where not.

**RESOLUTION RULES:**

- When agents agree: High confidence, weight equally
- When agents disagree <20 points: Resolve based on evidence quality
- When agents disagree >30 points: Flag for human review
- When Bear sets `hard_exclusion=true`: Take seriously, escalate if unsure

**OUTPUT REQUIREMENTS:**

- final\_score 0-100 with component breakdown
- resolved\_disagreements with reasoning
- unresolved\_disagreements escalated to human
- talking\_points that incorporate Bear's valid concerns
- approach\_strategy for GP outreach

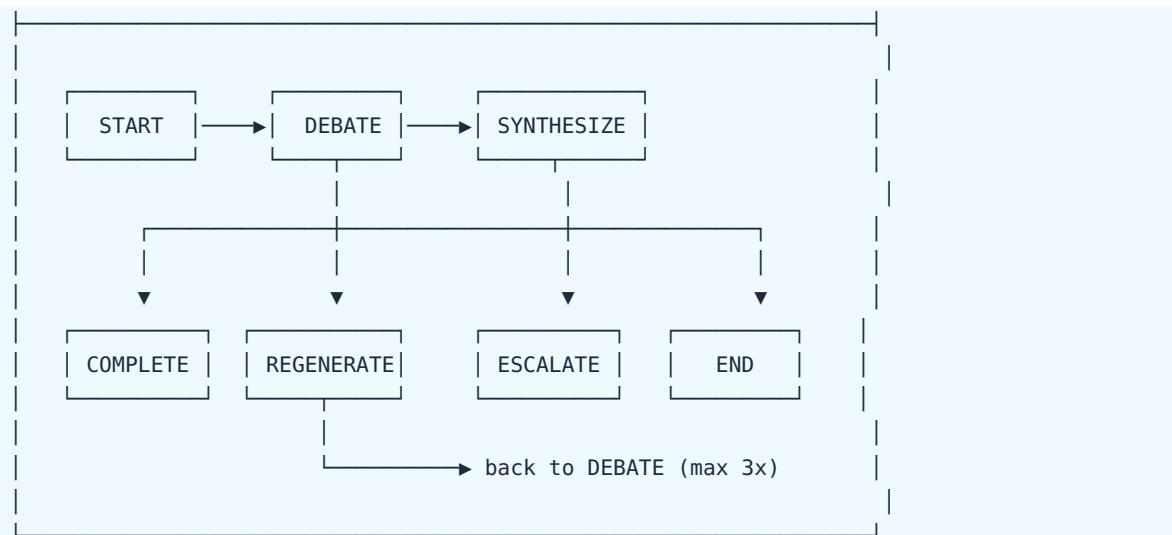

**ESCALATION TRIGGERS:**

- Disagreement >30 points
- Confidence <0.5
- Hard exclusion with Bull score >70

## LangGraph Orchestration

The debate system is implemented as a LangGraph state machine—a directed graph where nodes are agent executions and edges are conditional transitions.

LANGGRAPH STATE MACHINE

#### TRANSITION LOGIC:

- Disagreement  $\leq 20$  points  $\rightarrow$  COMPLETE (consensus reached)
- Disagreement  $> 20$  but  $\leq 30$   $\rightarrow$  REGENERATE with cross-feedback
- Disagreement  $> 30$  points  $\rightarrow$  ESCALATE to human review
- Max 3 iterations  $\rightarrow$  ESCALATE if still disagreeing

## Cross-Feedback Mechanism

When agents disagree, the regeneration step provides each agent with the other's critique:

- **Bull receives:** Bear's concerns, constraint violations, and risk factors
- **Bear receives:** Bull's talking points, alignment arguments, and hidden strengths

This forces agents to directly address counterarguments rather than talking past each other—often resolving disagreements within 2-3 iterations.

## Observability with Langfuse

Every agent execution is fully traced using Langfuse (open-source, self-hostable for data privacy):

### Full Trace Inspection

View every debate as a tree of agent calls with inputs, outputs, token counts, and latency.

### Prompt Versioning

Semantic versioning (X.Y.Z) for all prompts. A/B test new versions before full rollout.

**Quality Metrics**

Track escalation rates, disagreement patterns, and accuracy over time.

**Cost Tracking**

Per-debate token usage and API costs for margin optimization.

## Continuous Learning Loop

The agentic system improves over time through outcome tracking:

Signal	Latency	How It's Used
Match shortlisted/dismissed	Immediate	Tune hard filters, adjust agent weights
Response received	Days-Weeks	Key early predictor—train on high/low response patterns
Meeting scheduled	Weeks	Strong quality signal—validate match explanations
Commitment made	6-18 months	Ground truth—full model retraining

**Defensible Moat:** As more matches flow through the system, the agent prompts are refined, disagreement patterns are analyzed, and the learning loop compounds. Competitors starting from scratch face a cold-start problem—they lack the interaction data that makes our agents increasingly accurate.

## Why Multi-Agent vs. Single Model?

Dimension	Single Model	Multi-Agent Debate
<b>Overconfidence</b>	Common—no internal check	Bear agent challenges optimism
<b>Hallucination</b>	Can go undetected	Critic agents flag unsupported claims
<b>Edge Cases</b>	Often missed	Broad/Narrow interpreters catch nuances
<b>Explainability</b>	Black box score	Full debate transcript available

<b>Human Review</b>	All or nothing	Targeted escalation when confidence is low
<b>Improvement</b>	Retrain entire model	Tune individual agent prompts

# 8. Non-Functional Requirements

## Performance

Metric	Target	Measurement
Page Load (LCP)	< 2 seconds	Largest Contentful Paint for all pages
Search Response	< 500ms	Time from query to results display
Semantic Search	< 2 seconds	Including embedding generation and vector search
Match Generation	< 30 seconds	For 100 matches against full LP database
Pitch Generation	< 10 seconds	LLM response for single pitch

## Security

- **Authentication:** Secure password hashing, rate-limited login, account lockout after 5 failures
- **Authorization:** Row-level security policies, role-based access control
- **Data Protection:** Encryption at rest and in transit, no PII in logs
- **Input Validation:** Server-side validation, SQL injection prevention, XSS protection
- **Audit Logging:** Track who accessed what and when for compliance

## Scalability

- **Database:** Designed to handle 100,000+ LPs with efficient indexing
- **Concurrent Users:** Stateless backend supports horizontal scaling
- **API Rate Limiting:** Protect external services from overuse
- **Background Jobs:** Long-running tasks processed asynchronously

## Availability

- **Uptime Target:** 99.9% availability (excludes planned maintenance)
- **Disaster Recovery:** Daily database backups with point-in-time recovery

- **Graceful Degradation:** Core features work even if AI services are temporarily unavailable

# 9. Success Metrics

## User Engagement

Metric	Target	Why It Matters
Daily Active Users / Monthly Active Users	> 30%	Indicates habitual usage, not just occasional visits
Average Session Length	> 5 minutes	Users are doing meaningful work, not just checking in
Matches Reviewed per Session	> 10	Users are actively evaluating AI recommendations

## Feature Adoption

Metric	Target	Why It Matters
Fund Created within 7 Days of Signup	> 60%	Users are activating and seeing value quickly
Matches Shortlisted per Fund	> 20	AI matching is producing actionable recommendations
Pitches Generated per User (monthly)	> 5	Pitch generation is useful enough to use repeatedly

## Quality Indicators

Metric	Target	Why It Matters
Match Feedback: "Useful"	> 70%	AI recommendations are relevant and actionable
Pitch Copied to Clipboard	> 50%	Generated content is good enough to use
LP Contacted from Platform	> 20%	Platform enables actual outreach, not just research

# 10. Glossary

## AUM (Assets Under Management)

The total market value of assets that an investment firm manages on behalf of clients. For LPs, this indicates their overall investment capacity.

## Dry Powder

Capital that has been committed to a fund but not yet invested. Indicates available capital for new investments.

## Embedding

A vector (array of numbers) that represents text in a way that captures semantic meaning. Used for similarity matching between fund thesis and LP mandate.

## Endowment

A type of LP, typically a fund established by a university, hospital, or non-profit organization for long-term investment.

## Family Office

A private wealth management firm that handles investments for a wealthy family. Often more flexible than institutional LPs.

## GP (General Partner)

The fund manager who makes investment decisions and manages fund operations. GPs are LPxGP's primary users.

## Hard Filter

A matching criterion that must be satisfied for an LP to be considered. If failed, the LP is excluded regardless of other scores.

## HTMX

A JavaScript library that allows HTML elements to make AJAX requests directly, enabling dynamic updates without full page reloads.

## LP (Limited Partner)

An institutional investor who provides capital to investment funds. LPs include pension funds, endowments, family offices, and sovereign wealth funds.

## Mandate

An LP's investment guidelines, including acceptable strategies, geographic regions, check sizes, and return expectations.

### **Pension Fund**

A type of LP that manages retirement assets for employees of governments, corporations, or unions. Often large and long-term focused.

### **pgvector**

A PostgreSQL extension for storing and querying vector embeddings, enabling semantic similarity search in the database.

### **RLS (Row-Level Security)**

Database security feature that restricts which rows users can access based on their identity. Ensures data isolation between companies.

### **Semantic Search**

Search that understands meaning rather than just matching keywords. Uses embeddings to find conceptually similar content.

### **Soft Score**

A matching criterion that contributes to the overall fit score but doesn't exclude the LP if not perfectly matched.

### **Sovereign Wealth Fund**

A state-owned investment fund that invests global reserves. Among the largest LPs with diverse mandates.

### **Thesis**

A fund's investment philosophy and strategy, describing what types of companies they invest in and why.

### **Voyage AI**

An AI company providing embedding models optimized for specific domains like finance and legal.
