What LPxGP Does

LPxGP is an AI-powered intelligence platform that helps investment fund managers (General Partners, or GPs) find and engage the right institutional investors (Limited Partners, or LPs) for their funds.

In one sentence: LPxGP uses AI to match funds with compatible LPs and generate personalized outreach, reducing time-to-first-close for fundraising campaigns.

Core Capabilities

Capability	What It Does	User Benefit
LP Database	Searchable database of 5,000+ institutional investors with mandates, AUM, allocation targets, and key contacts	Hours of research condensed into seconds
Semantic Search	Natural language search that understands investment concepts, not just keywords	Find relevant LPs even with imprecise queries
AI Matching	Automatically rank LPs by fit score based on strategy, size, geography, and thesis alignment	Focus on highest-probability targets first
Match Explanations	AI-generated insights explaining why an LP is a good fit and what concerns to address	Walk into meetings fully prepared
Pitch Generation	Create personalized outreach emails, executive summaries, and talking points for each LP	Personalization at scale without the time cost
Pipeline Tracking	Manage outreach status, log activities, and track commitments across the team	Coordinated fundraising with visibility

The Problem We Solve

Fund managers face significant challenges in the fundraising process:

Information Overload

Thousands of institutional investors with varying mandates, preferences, and allocation strategies. Impossible to evaluate manually.

Manual Research

Hours spent researching LP mandates, recent commitments, and finding the right contact. Time that could be spent on relationships.

Poor Targeting

Wasted meetings with misaligned investors who don't invest in the fund's strategy, size, or geography. Opportunity cost is enormous.

Generic Outreach

One-size-fits-all pitch materials that don't resonate with specific LP priorities. Low response rates and missed opportunities.

Who Uses LPxGP

GP Fund Manager (Company Admin)

Role: Managing Partner or Partner at a PE/VC firm responsible for fundraising

Platform Access: Full access including fund creation, team management, and all LP features

Primary Goals:

- Raise capital for new funds efficiently
- Build relationships with the right institutional investors
- Track fundraising pipeline across the entire team

GP Associate (Company Member)

Role: Associate or VP supporting fundraising efforts at a PE/VC firm

Platform Access: LP search, matching, and pitch generation (read-only for fund settings)

Primary Goals:

- Research and identify potential LP targets
- Prepare meeting materials and personalized pitches
- Support partners with data and analysis

Super Admin (LPxGP Team)

Role: LPxGP platform administrator responsible for operations

Platform Access: Full administrative access across all companies

Primary Goals:

- Onboard new GP firms to the platform
- Maintain and improve LP database quality
- Monitor platform health and support users

2. Feature Specifications

LP Database & Search

Database Contents

The LP database contains comprehensive information on institutional investors:

- **Organization Profile:** Name, type (pension, endowment, family office, etc.), headquarters location, website
- **Financial Data:** Total AUM, PE/VC allocation percentage, typical check size range, target returns
- **Investment Mandate:** Strategy preferences, geographic focus, sector interests, stage preferences
- **Contact Information:** Key personnel with names, titles, and professional profiles
- **Activity Data:** Recent fund commitments (when available from public sources)

Search Capabilities

Search Type	Description	Example
Keyword Search	Traditional text matching on LP names and fields	"CalPERS" or "technology"
Semantic Search	Natural language queries using AI embeddings	"growth equity investors focused on enterprise software"
Filtered Search	Combine filters for precise targeting	Type: Pension, AUM: >\$10B, Geography: North America

AI-Powered Matching

Design Principle: Quality above all else. Cost is not a constraint. Success is measured by actual investment commitments, not just high match scores.

Quality-First Hybrid Pipeline

The matching system uses a 6-stage pipeline that combines hard filters, multiple scoring methods, LLM analysis, and continuous learning:

- Stage 1: HARD FILTERS (SQL)
 - └ Eliminate impossible matches (strategy, geography, size, track record)
 - └ Output: ~300-500 candidates from 10,000 LPs
- Stage 2: MULTI-SIGNAL SCORING (Python + Embeddings)
 - └ Attribute matching, semantic similarity, historical patterns
 - └ Output: Ranked list with preliminary scores
- Stage 3: LLM DEEP ANALYSIS (Claude via OpenRouter)
 - └ Analyze EVERY filtered candidate with LLM for nuanced judgment
 - └ Output: LLM-validated scores + detailed reasoning
- Stage 4: ENSEMBLE RANKING
 - └ Combine all scores, surface disagreements as "worth investigating"
 - └ Output: Final ranked matches with multi-perspective validation
- Stage 5: EXPLANATION GENERATION
 - └ Rich explanations, talking points, concerns, approach strategy
 - └ Output: Actionable intelligence for GP outreach
- Stage 6: LEARNING LOOP (Continuous)
 - └ Track outcomes, retrain models, A/B test changes

Ensemble Scoring Weights

Component	Weight	Source	Purpose
Rule-Based Score	25%	SQL + Python	Hard constraints, business logic
Semantic Score	25%	Voyage AI embeddings	Thesis/mandate alignment
LLM Score	35%	Claude analysis	Nuanced judgment, non-obvious fit
Collaborative Score	15%	Historical patterns	"LPs like this invested in funds like this"

LLM Scoring (Key Innovation)

Unlike systems that only use LLMs for explanations, we use Claude to actually score every match. The LLM analyzes fund profiles and LP mandates to identify:

- **Strategy Alignment:** How well does fund strategy match LP mandate?
- **Size Fit:** Is fund size in LP's sweet spot or at the edge?
- **Track Record:** Does team experience meet LP's requirements?
- **Timing:** Is LP likely allocating now based on known patterns?
- **Non-Obvious Insights:** Red flags, hidden opportunities, and nuanced factors

Bidirectional Matching

The system supports matching in both directions:

- **GP → LP:** GP creates fund, system finds matching LPs ranked by fit quality
- **LP → GP:** LPs can see which funds match their mandate (optional feature)

Learning From Slow Feedback

Critical Reality: Investment sector feedback takes 12-18 months (first meeting → commitment). The system uses proxy metrics for early learning.

Tier	Signal	Latency	Use For
1	Match shortlisted/dismissed	Immediate	Hard filter tuning
2	Response received	Days-Weeks	Key early predictor
2	Meeting scheduled	Weeks	Strong quality signal
3	Due diligence started	2-6 months	Deal progression
4	Commitment made	6-18 months	Ground truth

Match Output

For each fund, the system generates:

- **Ranked LP List:** LPs ordered by fit score (0-100)
- **Score Breakdown:** How each component contributed to the score
- **Talking Points:** What to emphasize when approaching this LP
- **Risk Factors:** Potential concerns to address proactively

Pitch Generation

Output Types

Type	Length	Use Case
Executive Summary	1 page	One-pager tailored to LP's interests and mandate
Outreach Email	3-5 paragraphs	Initial introduction referencing LP's recent activity
Talking Points	Bullet list	Meeting preparation with key messages and responses

Human-in-the-Loop Design: All AI-generated content requires human review before use. There is no auto-send functionality - users must copy to clipboard and paste into their email client. This ensures quality control and compliance with professional communication standards.

Pipeline Management

The platform tracks LPs through the fundraising pipeline:

- **Identified:** LP discovered through search or matching
- **Shortlisted:** Selected for potential outreach
- **Contacted:** Initial outreach sent
- **Meeting Scheduled:** Engagement confirmed
- **In Diligence:** Active evaluation underway
- **Committed:** Commitment received

3. User Journeys

This section describes the key user experience flows through the LPxGP platform.

Journey 1: Platform Onboarding

Actor: Sarah, LPxGP Super Admin

Goal: Onboard a new GP firm to the platform

Screen Flow: Admin Dashboard → Companies → Create Company → Company Detail → Invite Admin

Sarah receives a request from Acme Capital to join LPxGP. She reviews platform health on the Admin Dashboard, navigates to Companies, creates the new company profile with billing information, and invites John (Managing Partner) as the company admin via email invitation. John receives a secure link to accept the invitation and set up his account.

Journey 2: Fund Creation

Actor: John, Partner at Acme Capital

Goal: Create fund profile for Growth Fund III

Screen Flow: Dashboard → Create Fund → Upload Deck → AI Extraction → Fund Detail

John clicks "+ New Fund" on his dashboard. He can either manually enter fund details or upload a pitch deck PDF. Choosing to upload, the AI extracts fund information (name, strategy, target size, thesis, track record) with confidence scores for each field. John reviews and confirms high-confidence items, manually corrects a low-confidence field, and saves the fund profile. The fund is now ready for LP matching.

Journey 3: LP Research & Matching

Actor: Maria, Associate at Acme Capital

Goal: Find and evaluate LPs for Growth Fund III

Screen Flow: Dashboard → LP Search → Apply Filters → LP Detail → Matches → Match Detail → Add to Shortlist

Maria uses two approaches: manual research and AI matching. For manual research, she navigates to LP Search, enters "growth equity technology investors" and applies filters (Check Size > \$10M, Geography: North America). She reviews 45 results, clicks on promising LPs to view full profiles with mandates and contacts.

For AI matching, she goes to Growth Fund III and clicks "View Matches." The system shows 87 LPs ranked by fit score. She clicks on CalPERS (score: 92) to see why it's a strong match: strategy alignment, appropriate size, and high semantic similarity to the fund thesis. The AI provides talking points about CalPERS's recent tech investments and flags a potential concern about their preference for established managers.

Journey 4: Pitch & Outreach

Actor: Maria, Associate at Acme Capital

Goal: Create personalized outreach for high-priority LPs

Screen Flow: Match Detail → Pitch Generator → Generate → Edit → Copy → Outreach Hub

From the CalPERS match detail, Maria clicks "Generate Pitch" and selects "Outreach Email." The AI generates a personalized email referencing CalPERS's recent allocations and how Growth Fund III aligns with their mandate. Maria edits the subject line to add a mutual connection reference, adjusts the call-to-action timing, and copies the final email to clipboard. She pastes it into her email client and sends. Back in LPxGP, she moves CalPERS to "Contacted" in the Outreach Hub and logs the activity.

4. Screen Reference

This section documents all 35 screens in the LPxGP platform. Each screen includes a visual mockup and explanation of its purpose, user actions, and role in user journeys.

UX Flow:

[Login](#) > Dashboard | [Forgot Password](#) > [Reset Password](#) > [Login](#)

[... All Screens](#)

The Login screen is the entry point for all authenticated users. Users enter their email and password to access the platform. The design emphasizes security and trust with a clean, professional interface. Failed login attempts are tracked and accounts are locked after 5 consecutive failures to prevent brute-force attacks. A "Forgot Password" link provides account recovery options.

Accept Invitation

New user onboarding

The screenshot shows the 'Accept Invitation' page for a new user onboarding. The page has a dark blue header with the title 'Accept Invitation' and 'New user onboarding'. Below the header, there's a dark sidebar on the left containing the LPxGP logo, 'GP-LP Intelligence Platform', and two green checkmark icons with the text: 'You've been invited to join Acme Capital' and 'Complete your account setup below'. The main content area on the right starts with a message 'You're joining' followed by the invitation details: 'AC Acme Capital Private Equity Firm'. It shows the invitation was sent to 'john.partner@acmecap.com'. The user is prompted to enter their 'Full Name' (input field contains 'John Partner'), 'Create Password' (input field contains '*****'), and 'Confirm Password' (input field contains '*****'). A checkbox labeled 'I agree to the Terms of Service and Privacy Policy' is present. At the bottom is a large blue button labeled 'Accept Invitation'. Below the main content, there's a link 'Already have an account? Sign in' and a navigation bar at the bottom with 'UX Flow:', 'Email Invitation > Accept Invitation > Dashboard', and 'All Screens'.

Dashboard | **Funds** | Search | Matches | Outreach | ... All Screens

The Funds screen shows all funds belonging to the user's company. Each fund card displays key metrics: fund name, status, target size, number of LP matches, and last activity date. Users can filter by status or search by name. Clicking a fund card navigates to the Fund Detail view. Company admins can see all company funds; members see funds they're assigned to.

Fund Detail

Fund profile with thesis and track record

The screenshot shows the LPxGP interface for a fund profile. At the top, there's a navigation bar with 'LPxGP' and links for 'Dashboard', 'Funds', 'Search', and 'Outreach'. A user icon for 'Acme Capital' with initials 'JP' is also present. Below the navigation is a breadcrumb trail: 'Funds / Growth Fund III'. The main content area features a card for 'Growth Fund III' which is currently 'Raising' private equity. The card includes sections for 'Fund Overview' (Target Size: \$500M, Target Close: Q2 2025, Geography Focus: North America, Check Size: \$25M - \$75M) and 'Matching Stats' (Total Matches: 45, High Score (80+): 12, Shortlisted: 8, Contacted: 5). There are buttons for 'Edit Fund' and 'View Matches'. Another section, 'Investment Thesis', states: 'Growth Fund III focuses on technology-enabled businesses in the upper mid-market segment'. At the bottom, a footer bar shows 'UX Flow: GP User' and navigation links for 'Dashboard', 'Funds', 'Fund Detail' (which is active), 'Matches', and 'Outreach', along with a link to 'All Screens'.

Fund Overview

Check Size	\$25M - \$75M	Stage	Growth / Expansion

Matching Stats

Total Matches	45
High Score (80+)	12
Shortlisted	8
Contacted	5

Investment Thesis

Growth Fund III focuses on technology-enabled businesses in the upper mid-market segment

Quick Actions

The Fund Detail screen is the comprehensive profile for a single fund. It displays the fund thesis, investment strategy, geographic focus, target size, and track record of notable exits. A sidebar shows matching statistics and quick actions (View Matches, Generate Pitch). Company admins can edit fund details; members have read-only access. This is the primary context for LP matching and outreach activities.

The Create Fund screen enables users to set up a new fund profile. Users can either manually enter fund details or upload a pitch deck (PDF/PPTX) for AI-assisted extraction. When a deck is uploaded, the system uses Claude to extract fund name, strategy, thesis, target size, and other details. Extracted fields show confidence scores, allowing users to review and correct low-confidence items before saving.

UX Flow: GP User Dashboard Fund **Matches** Match Detail Shortlist ... All Screens

The Matches screen shows AI-generated LP recommendations for a specific fund. LPs are ranked by a fit score (0-100) calculated from strategy alignment, size fit, geographic overlap, and semantic similarity between fund thesis and LP mandate. Each match card shows the score, LP name, type, AUM, and key alignment indicators (checkmarks for strong fits, warnings for concerns). Users can filter by score range, sort by different criteria, and bulk-add matches to their shortlist.

Match Analysis

AI insights and talking points

The screenshot shows the LPxGP Match Analysis interface. At the top, there's a navigation bar with 'LPxGP' and links to 'Dashboard', 'Funds', 'Search', and 'Outreach'. On the right, it shows 'Acme Capital' and a user icon. Below the navigation is a breadcrumb trail: 'Funds / Growth Fund III / Matches / CalPERS Analysis'. A main card displays a score of '92' for 'CalPERS x Growth Fund III' with a 'Match Analysis & AI Insights' subtitle. It includes a 'Generate Pitch' button and a '+ Add to Shortlist' button. Below this, a 'Score Breakdown' section shows four categories: 'Strategy Fit' (95), 'Size Match' (90), 'Geography' (92), and 'Thesis Alignment' (88). Underneath, an 'AI Match Analysis' section titled 'Why This Is a Strong Match' lists factors: 'Strategy alignment: CalPERS actively invests in growth equity managers targeting technology-enabled businesses, matching your fund's focus'. At the bottom, there's a footer with 'UX Flow: GP User' and navigation links for 'Dashboard', 'Matches', 'Match Detail', 'Pitch', and 'Shortlist', along with a link to 'All Screens'.

Score Breakdown

- 95 Strategy Fit
- 90 Size Match
- 92 Geography
- 88 Thesis Alignment

AI Match Analysis

Why This Is a Strong Match

CalPERS presents an excellent fit for Growth Fund III based on several key factors:

- ✓ **Strategy alignment:** CalPERS actively invests in growth equity managers targeting technology-enabled businesses, matching your fund's focus.

The Match Detail screen explains why a specific LP is recommended for a fund. It breaks down the match score into components: strategy alignment, size compatibility, geographic fit, and semantic similarity. The AI generates talking points highlighting what to emphasize in outreach and identifies potential concerns to address proactively. Recent LP activity (if available) helps users time their outreach. A "Generate Pitch" button launches personalized content creation.

Pitch Generator

AI-powered outreach content

The screenshot shows the LPxGP Pitch Generator interface. On the left, there's a sidebar with 'Outreach' selected. The main area has two panels: 'Pitch Settings' on the left and 'Generated Outreach Email' on the right.

Pitch Settings:

- Target LP: CalPERS (Score: 92)
- Fund: Growth Fund III
- Content Type: Outreach Email (selected)
- Tone: Professional & Formal
- Key Points to Emphasize: (list not visible)

Generated Outreach Email:

Green checkmark icon: Generated Outreach Email. Buttons: Regenerate, Copy to Clipboard.

Yellow warning box: **Human review required:** AI-generated content should be reviewed and personalized before sending.

To: Michael Smith, Managing Investment Director
Subject: Acme Capital Growth Fund III - Investment Opportunity

Message content:

Dear Mr. Smith,

I hope this message finds you well. I am reaching out regarding Acme Capital's Growth Fund III, a \$500 million growth equity vehicle focused on technology-enabled businesses in North America. Given CalPERS' strategic interest in growth equity managers with demonstrated operational value creation capabilities, I believe there may be strong alignment with our investment approach.

Key highlights:

Track Record: Fund I has achieved a 28.5% net IRR, ranking in the top quartile among growth equity peers

Team: Our partners average 20+ years of PE experience across technology.

Bottom navigation: UX Flow: GP User, Dashboard, Match Detail, Pitch Generator, Outreach, All Screens.

The Pitch Generator uses Claude to create personalized outreach content for specific LP-fund combinations. Users select the output type: Executive Summary (1-page overview), Outreach Email (introduction message), or Talking Points (meeting preparation). The AI references the LP's mandate, recent activity, and the fund's thesis to create relevant, personalized content. All generated content is editable before copying to clipboard. There is no auto-send - this ensures human review of all outreach.

UX Flow: Super Admin Dashboard Companies Users People LPs Data Quality Health ... All Screens

The Admin Dashboard provides Super Admins with a bird's-eye view of the entire LPxGP platform. Key metrics include total companies, users, funds, and LPs in the database. System health indicators show API status, database performance, and external service connectivity. Recent activity logs show new company signups, user invitations, and data imports. Quick actions provide access to common admin tasks.

UX Flow: Super Admin Dashboard Companies Users People LPs Data Quality Health ... All Screens

The Companies screen lists all GP firms registered on LPxGP. Admins can view company details, user counts, fund counts, and subscription status. Search and filter options help find specific companies. Actions include creating new companies, viewing company details, and managing billing. This is the primary customer management interface for platform administrators.

UX Flow: Super Admin Dashboard Companies Users People LPs Data Quality Health ... All Screens

The People screen manages the global database of LP contacts (individuals who work at institutional investors). Unlike LPs (organizations), People tracks individuals with their employment history. Admins can search contacts, view profiles, and track career movements between organizations. This data enriches LP profiles with specific relationship targets for outreach.

The LPs screen is the master database of institutional investors. Admins can browse, search, filter, and edit LP records. Each LP entry shows name, type, AUM, location, and data quality score. Bulk actions allow updating multiple records. The Import Wizard button provides access to CSV import for adding new LPs. Data quality indicators highlight records needing attention.

Edit LP

LP data management form

The screenshot shows the 'Edit LP' interface for the CalPERS entry. At the top, there's a navigation bar with 'LPxGP ADMIN' and links for Dashboard, Companies, Users, People, LPs (which is the active tab), and Data Quality. On the far right, it shows 'Super Admin SA'. Below the navigation is a breadcrumb trail: 'LPs / CalPERS'. The main content area has a title 'Edit LP: CalPERS' and a note 'Last updated: 2 weeks ago'. A green 'High Quality' badge is visible. The form is divided into sections: 'Basic Information' (LP Name: CalPERS, Full Name: California Public Employees' Retirement System, Type: Public Pension, Location: Sacramento, CA, USA); 'Financial Information' (Total AUM: \$ 450B, PE Allocation %: 13%); and 'Investment Mandate' (Investment Mandate: Investment Grade Bonds). The bottom navigation bar includes 'UX Flow: Super Admin' and links for Dashboard, Companies, Users, People, LPs (selected), Data Quality, and Health. There's also a link to 'All Screens'.

The Edit LP screen allows admins to maintain LP data quality. All fields are editable: name, type, location, AUM, allocation targets, investment mandate, and geographic preferences. The investment mandate text field is particularly important as it's used for semantic matching. Data source and quality score help track provenance. Changes are logged for audit purposes.

The Data Quality screen helps admins maintain high-quality LP data. It shows data completeness metrics, identifies records with missing fields, flags potential duplicates, and highlights stale data. Quality scores are calculated based on field completeness, recency, and source reliability. Admins can drill down into specific issues and take corrective actions.

The screenshot shows the LPxGP Import Wizard interface. At the top, a dark header bar displays the title "Import Wizard" and "CSV import tool". Below this, a navigation bar includes links for "Dashboard", "Companies", "Users", "People", "LPs" (which is the active tab), and "Data Quality". On the far right, it shows the user "Super Admin" and a "SA" badge.

The main content area is titled "Map CSV Fields" and displays the message "Match your CSV columns to LPxGP fields. 500 rows detected." It shows a file upload section with "File: lp_database_export_2024.csv" and "500 rows x 12 columns". Below this is a mapping grid:

CSV Column	LPxGP Field
organization_name	LP Name *
investor_type	Type *
hq_location	Location

At the bottom of the main area, there is a footer with the text "UX Flow: Super Admin" and navigation links for "Dashboard", "Companies", "Users", "People", "LPs" (active), "Data Quality", and "Health". To the right of the footer is a link "← All Screens".

The overall interface is clean and modern, using a light gray background with blue and orange accents for buttons and tabs.

Text Description of the Import Wizard Process:

The Import Wizard guides admins through bulk LP data import. It's a multi-step process: upload CSV, map columns to fields, preview changes, and execute import. The system validates data, detects duplicates, and shows potential issues before committing. Import jobs can be paused, resumed, or rolled back. Progress is tracked with detailed logging for troubleshooting.

UX Flow: Super Admin Dashboard Companies Users People LPs Data Quality Health .. All Screens

The System Health screen monitors platform infrastructure and external services. It shows status for the database, API server, authentication service, OpenRouter (LLM), Voyage AI (embeddings), and email delivery. Response times and error rates are tracked. Alerts notify admins of issues. This is the first place to check when users report problems.

UI State Screens

3 screens — Loading, empty, and error states for better user experience

Empty Dashboard

First-time user experience

The screenshot shows the LPxGP dashboard for a first-time user. At the top, there's a navigation bar with 'LPxGP' and links for 'Dashboard', 'Funds', 'Search', and 'Outreach'. On the right, it shows 'Acme Capital' and a profile icon. Below the navigation is a section titled 'Dashboard' with a 'Welcome back, John' message. A large central area features a house icon and the text 'Welcome to LPxGP! Create your first fund to get started with LP matching and outreach.' Below this is a dark button with '+ Create Your First Fund'. At the bottom, there's a section titled 'What you can do with LPxGP' with three icons: a green circle with a checkmark, a blue speech bubble, and a purple document. The footer includes a 'UX Flow: GP User (Empty State)' label, navigation links for 'Dashboard (Empty)', 'Dashboard (Active)', 'Create Fund', and 'All Screens'.

The Empty Dashboard appears when a user has no funds yet. Instead of empty space, it provides a welcoming onboarding experience. A prominent call-to-action encourages users to create their first fund. Brief feature descriptions explain what they'll be able to do: find matching LPs, generate pitches, and track outreach. This reduces friction for new users and increases activation rates.

The screenshot shows the LPxGP product interface. At the top, a dark header bar displays the title "Loading Matches" and the subtitle "Match generation progress". Below this, a navigation bar includes links for "Dashboard", "Funds", "Search", and "Outreach", with "Funds" being the active tab. On the right side of the header, there are user profile icons for "Acme Capital" and "JP". The main content area is titled "LP Matches" and specifies "Growth Fund III". A large circular progress indicator with a magnifying glass icon is centered. Below it, the text "Analyzing 10,000 LPs for Growth Fund III..." is displayed, followed by a subtitle: "We're finding the best institutional investors that match your fund strategy, geography, and size requirements." A progress bar indicates "68%" completion, with a note below stating "Estimated time remaining: ~45 seconds". A list of current steps shows three items: "Applying strategy filters (PE Growth)" (checked), "Filtering by geography (North America)" (checked), and "Computing semantic similarity scores" (unchecked). At the bottom, a navigation bar shows the "UX Flow: Match Generation" path: "Fund" → "Loading Matches" (highlighted in blue) → "Matches (Complete)". There is also a link to "All Screens".

The Loading Matches screen appears during AI match generation, which can take 30+ seconds for large LP databases. It shows a progress bar, current step (applying filters, computing similarity scores), and estimated time remaining. A cancel button allows users to abort if needed. This transparent feedback prevents users from thinking the system is frozen and reduces support requests.

API Error

Error state handling

The screenshot shows a user interface for an application named LPxGP. At the top, there is a dark header bar with the LPxGP logo and navigation links for Dashboard, Funds, Search, and Outreach. On the right side of the header, there is a user profile section for "Acme Capital" with initials "JP". Below the header is a large white content area. In the center, there is a red circular icon with a white exclamation mark. Below this icon, the text "Something went wrong" is displayed in bold. A smaller text below it says, "We encountered an error while processing your request. This might be a temporary issue with our service." To the left of this text is a "ERROR DETAILS" section with a "Copy" button. Inside this section, there is a table with three rows: "Error Code:" followed by "API_503", "Timestamp:" followed by "2024-01-15 14:32:18 UTC", and "Request ID:" followed by "req_7f3a8b2c9d4e". At the bottom of the content area are two buttons: "Try Again" and "Go Back". At the very bottom of the page, there is a dark footer bar with the text "UX Flow: Error State", "API Error" (which is highlighted in white), "Dashboard", "Loading State", and "... All Screens".

The API Error screen provides graceful error handling when something goes wrong. Instead of cryptic error messages, it shows a friendly explanation and clear next steps. A "Try Again" button attempts to retry the operation. Error details are available for technical users and support. Contact information helps users get assistance if the problem persists.

The LP Dashboard is the command center for institutional investors using LPxGP. It provides an at-a-glance view of matching funds, allocation availability, and recent activity. LPs see statistics including new fund matches, funds reviewed, and current allocation capacity. The top matches table shows funds ranked by compatibility score with quick actions to mark interest or pass. This bidirectional matching enables LPs to proactively discover funds rather than waiting for GP outreach.

Fund Matches

Match Detail

Preferences

← All Screens

The Fund Matches screen shows all funds ranked by compatibility with the LP's investment mandate. LPs can filter by strategy, fund size, and geography. Each fund card displays the GP firm, strategy tags, target size, fund number, closing timeline, and match score. Quick actions allow LPs to mark interest, pass, or view detailed analysis. The scoring algorithm considers strategy alignment, size fit, track record, geographic overlap, and ESG requirements.

Fund Match Detail

Detailed fund analysis for LPs

The screenshot shows the Fund Match Detail page for the Sequoia Growth Fund VI. At the top, there's a navigation bar with 'LPxGP LP Portal' and links for Dashboard, Fund Matches (which is underlined), Preferences, and Profile. On the right, it shows 'CalPERS CP' and a green 'Mark Interested' button. The main content area has a header 'Fund Matches / Sequoia Growth Fund VI' and 'Sequoia Capital'. To the right, a large green box displays a 'Match Score' of '94'. Below the score are three buttons: 'Mark Interested' (green), 'Pass' (white), and 'CalPERS CP' (green). The left side contains two main sections: 'Why This Match' and 'Score Breakdown'. The 'Why This Match' section lists several reasons why the fund is a good fit, including strategy alignment, track record, and ESG commitment. The 'Score Breakdown' section shows a progress bar for 'Strategy Alignment' at 96/100. The right side features a 'Fund Details' table with information like Target Size (\$2.5B), Fund Number (Fund VI), and Strategy (Growth Equity). Below that is a 'GP Team' section with a profile picture and the name 'Jim Lucks'. The bottom of the page includes a footer with 'UX Flow: LP User', navigation links for LP Dashboard, Fund Matches, Match Detail (which is active), and Preferences, and a link to 'All Screens'.

Why This Match

Sequoia Growth Fund VI is a strong match for CalPERS based on multiple alignment factors:

- Strategy alignment:** Growth equity focus matches your core allocation strategy with emphasis on established technology companies.
- Track record:** Fund V delivered 2.8x net MOIC and 28% net IRR, exceeding your minimum return thresholds.
- Check size fit:** \$100M minimum commitment aligns with your typical allocation of \$50-200M per fund.
- ESG commitment:** Sequoia has a formal ESG policy and dedicated sustainability team, meeting your responsible investment requirements.

UX Flow: LP User LP Dashboard Fund Matches Match Detail Preferences All Screens

The Fund Match Detail screen explains why a specific fund is recommended for the LP. It provides a narrative explanation of alignment factors, a detailed score breakdown across multiple dimensions (strategy, size, track record, geography, ESG), the fund's investment thesis, historical performance data, and key considerations or concerns. LPs can mark interest, request a meeting, or request the fund deck. Private notes allow LPs to track their evaluation.

The LP Profile screen displays the LP's organization information and investment mandate. Organization details (name, type, AUM, headquarters) are managed by LPxGP administrators to ensure data quality. The investment mandate section shows the LP's strategies, geographic focus, check size, and track record requirements. User profile settings allow LPs to manage their personal information and security settings including password and two-factor authentication.

5. Data Model

Entity Overview

LPxGP uses a unified relational data model where GPs and LPs are both organizations, and platform users are people with login access:

Key Entities

Entity	Description	Key Fields
Organizations	Unified table for both GP firms and LP investors	type (gp/lp), name, aum, lp_type, mandate_embedding
People	All industry professionals (can work at any org)	name, email, primary_org_id, auth_user_id, role
Employment	Career history linking people to organizations	person_id, org_id, title, start_date, end_date
Funds	Investment funds owned by GP organizations	org_id, name, strategy, target_size, thesis_embedding

Matches	Fund-LP compatibility scores	fund_id, lp_org_id, total_score, score_breakdown
Pitches	AI-generated outreach content	match_id, type, content, created_by
Outreach Events	Track journey from match to commitment	match_id, event_type, event_date, meeting_type
Match Outcomes	Final outcomes for model training	match_id, outcome, commitment_amount, features_at_match_time
Relationships	GP-LP relationship intelligence	gp_org_id, lp_org_id, relationship_type, prior_commitments
LP Capacity	Timing intelligence for allocation windows	lp_org_id, fiscal_year, remaining_capacity, next_allocation_window

Key Design Decisions

- **Unified Organizations:** GPs and LPs are both organizations with a type discriminator. No separate tables.
- **People Work at Organizations:** Clean FK to organizations.id - no polymorphic relationships.
- **People Can Move:** Employment history tracks job changes. Someone can move from LP to GP.
- **Platform Users = People + Auth:** People with auth_user_id set can log in. No separate users table.
- **Full Referential Integrity:** All foreign keys are real database constraints.

Vector Embeddings

Semantic matching uses 1024-dimensional vector embeddings stored in PostgreSQL with pgvector:

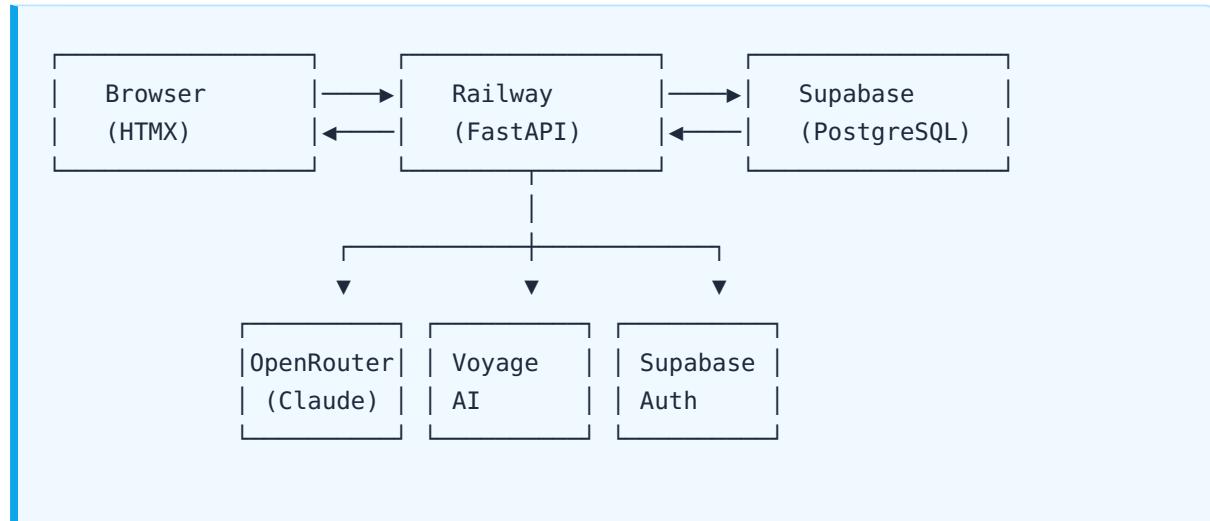

- **Fund Thesis Embedding:** Vector representation of fund strategy and thesis text
- **LP Mandate Embedding:** Vector representation of LP investment mandate (on organizations table)

- **Similarity Calculation:** Cosine similarity between embeddings determines semantic fit

6. Technical Architecture

System Overview

LPxGP is built as a modern web application with server-rendered UI and AI integrations:

Technology Stack

Layer	Technology	Purpose
Backend	Python + FastAPI	API server, business logic, async operations
Frontend	Jinja2 + HTMX + Tailwind	Server-rendered UI with dynamic updates, no build step
Database	Supabase (PostgreSQL + pgvector)	Data storage, vector similarity search, row-level security
Authentication	Supabase Auth	Invite-only signup, session management, password reset
LLM	OpenRouter (Claude)	Pitch generation, fund extraction, match explanations
Embeddings	Voyage AI	Finance-optimized vectors for semantic matching

Hosting	Railway	Auto-deploy from GitHub, managed infrastructure
---------	---------	---

Security Model

- **Invite-Only Access:** Users can only join via company admin invitation - no self-signup
- **Row-Level Security:** Database policies ensure users only see their company's data
- **Role-Based Access:** Company Admins vs Members vs Super Admins with different permissions
- **Human-in-the-Loop:** All AI-generated content requires human review before external use
- **Secure Sessions:** JWT tokens with refresh, automatic expiration, and secure cookie handling

7. Non-Functional Requirements

Performance

Metric	Target	Measurement
Page Load (LCP)	< 2 seconds	Largest Contentful Paint for all pages
Search Response	< 500ms	Time from query to results display
Semantic Search	< 2 seconds	Including embedding generation and vector search
Match Generation	< 30 seconds	For 100 matches against full LP database
Pitch Generation	< 10 seconds	LLM response for single pitch

Security

- **Authentication:** Secure password hashing, rate-limited login, account lockout after 5 failures
- **Authorization:** Row-level security policies, role-based access control
- **Data Protection:** Encryption at rest and in transit, no PII in logs
- **Input Validation:** Server-side validation, SQL injection prevention, XSS protection
- **Audit Logging:** Track who accessed what and when for compliance

Scalability

- **Database:** Designed to handle 100,000+ LPs with efficient indexing
- **Concurrent Users:** Stateless backend supports horizontal scaling
- **API Rate Limiting:** Protect external services from overuse
- **Background Jobs:** Long-running tasks processed asynchronously

Availability

- **Uptime Target:** 99.9% availability (excludes planned maintenance)
- **Disaster Recovery:** Daily database backups with point-in-time recovery

- **Graceful Degradation:** Core features work even if AI services are temporarily unavailable

8. Success Metrics

User Engagement

Metric	Target	Why It Matters
Daily Active Users / Monthly Active Users	> 30%	Indicates habitual usage, not just occasional visits
Average Session Length	> 5 minutes	Users are doing meaningful work, not just checking in
Matches Reviewed per Session	> 10	Users are actively evaluating AI recommendations

Feature Adoption

Metric	Target	Why It Matters
Fund Created within 7 Days of Signup	> 60%	Users are activating and seeing value quickly
Matches Shortlisted per Fund	> 20	AI matching is producing actionable recommendations
Pitches Generated per User (monthly)	> 5	Pitch generation is useful enough to use repeatedly

Quality Indicators

Metric	Target	Why It Matters
Match Feedback: "Useful"	> 70%	AI recommendations are relevant and actionable
Pitch Copied to Clipboard	> 50%	Generated content is good enough to use
LP Contacted from Platform	> 20%	Platform enables actual outreach, not just research

9. Glossary

AUM (Assets Under Management)

The total market value of assets that an investment firm manages on behalf of clients. For LPs, this indicates their overall investment capacity.

Dry Powder

Capital that has been committed to a fund but not yet invested. Indicates available capital for new investments.

Embedding

A vector (array of numbers) that represents text in a way that captures semantic meaning. Used for similarity matching between fund thesis and LP mandate.

Endowment

A type of LP, typically a fund established by a university, hospital, or non-profit organization for long-term investment.

Family Office

A private wealth management firm that handles investments for a wealthy family. Often more flexible than institutional LPs.

GP (General Partner)

The fund manager who makes investment decisions and manages fund operations. GPs are LPxGP's primary users.

Hard Filter

A matching criterion that must be satisfied for an LP to be considered. If failed, the LP is excluded regardless of other scores.

HTMX

A JavaScript library that allows HTML elements to make AJAX requests directly, enabling dynamic updates without full page reloads.

LP (Limited Partner)

An institutional investor who provides capital to investment funds. LPs include pension funds, endowments, family offices, and sovereign wealth funds.

Mandate

An LP's investment guidelines, including acceptable strategies, geographic regions, check sizes, and return expectations.

Pension Fund

A type of LP that manages retirement assets for employees of governments, corporations, or unions. Often large and long-term focused.

pgvector

A PostgreSQL extension for storing and querying vector embeddings, enabling semantic similarity search in the database.

RLS (Row-Level Security)

Database security feature that restricts which rows users can access based on their identity. Ensures data isolation between companies.

Semantic Search

Search that understands meaning rather than just matching keywords. Uses embeddings to find conceptually similar content.

Soft Score

A matching criterion that contributes to the overall fit score but doesn't exclude the LP if not perfectly matched.

Sovereign Wealth Fund

A state-owned investment fund that invests global reserves. Among the largest LPs with diverse mandates.

Thesis

A fund's investment philosophy and strategy, describing what types of companies they invest in and why.

Voyage AI

An AI company providing embedding models optimized for specific domains like finance and legal.
